

Protecting **marble** and **tile** for renovation of iconic home

Project Details:

- The Razor House
- Woodmeister Master Builders
- Skudo HT and LT Tack-Mats - 4,100 s.f.
- Marble and tile
- 2014

Project Scope:

The Razor House in La Jolla, California, is a stunning, 11,000 s.f. estate built in 2007. Its floor to ceiling windows, contrasted with concrete, reveal a view that stretches for miles toward a state reserve. San Diego architect Wallace Cunningham designed the home to appear to be built right into the mountain side. The home features four bedrooms, six bathrooms, a circular theater, glass elevator, underground garage and a rooftop fitness room along with several infinity pools.

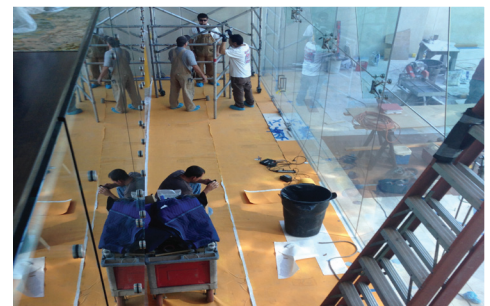

In 2014, Skudo's HT (Heavy Traffic) and LT (Light Traffic) Tack-Mats protected marble and tile while repairs and renovations were underway.

The Razor House, La Jolla, CA

Applying the LT Tack-Mat

Tile protected from foot traffic and equipment

HT Tack-Mat safeguards marble stairs from foot traffic and dirt
