

Innovative, Purpose-Built Surface Protection Systems.

Save the headache, time and money of making repairs.

- "By far, Skudo® is the most durable floor protection system on the market."
- Doug Carlton,
 Concrete Décor Magazine

- Machinery use
- Foot traffic
- Spills including mortar, stucco, paint, oil
- Stains including rust, chalk, hydraulic fluid
- Dirt, dust and debris
- Scaffolding and shoring
- Water
- Mold
- UV exposure
- Sparks and fire

Heavy Traffic

Medium Traffic

Light Traffic

"Skudo held up well! We had a couple of hydraulic leaks from one of the electric man lifts, resulting in a puddle of oil on the floor overnight. Skudo did not allow the oil to penetrate through."

This Is All We Do.

Skudo has a protection solution for almost all surface types and work environments: most substrates, vertical or horizontal, indoors or outdoors, residential or commercial.

Improves job site safety

- Non-slip work surface in both wet and dry conditions.
- Eliminates slip and trip hazards
- Stationary stays in place despite worker activity and weather
- High visibility colors

Description

Skudo HT (Heavy Traffic) Commercial System is a fully adhered, breathable, temporary surface protection system for commercial projects. It consists of a flexible, peelable Concrete Base Coat and Skudo HT (Heavy Traffic) Mat. The HT Commercial System is our most durable protection, withstanding machinery, shoring and tough environments. It is perfectly suited for protecting concrete, allowing full cure without creating hydration (cure) lines.

Like all Skudo products, the HT Mat temporarily bonds to the surface, blocking debris, materials and spills from damaging the protected surface. Skudo HT provides a slip resistant, seamless and stationary work surface, ideal for placing construction marks and layouts.

Skudo HT is designed to protect surfaces from commercial traffic during construction for up to 12 months. Once the project is completed, the HT Mat is peeled up, revealing a clean and damage-free surface.

Uses

- Protects most surfaces, including freshly placed concrete as early as 14 days.
 - *Note: This is subject to slab thickness, mix design, weather, etc. Please contact your Skudo Rep to determine suitability
- Protects polished concrete and terrazzo
- Areas can be polished and protected before interior walls are erected. Framing can be placed over the top of the Commercial System, which then can be left in place underneath
- Under Scaffolding & Shoring
- Flooring and Staircases
- Works as a blank canvas for all types of construction marks and layouts - won't stain or damage surface

Benefits

- Reliable surface protection for Heavy construction site traffic
- Breathable system
- Superior spill, stain and water resistance (proven against flooding)
- Resistance to UV, rust, impact, and welding splatter
- Class 1 Fire/Flame retardant according to ASTM E 648 and NFPA 253 standards.
- Antibacterial/Antifungal: Test-verified protection against bacteria and molds that cause infection. (ISO-20743)
- Safer working surface
- High slip resistance in wet and dry conditions
- Seamless and stationary
- Cleans surface upon peel up removal

Protected in the United States by patent #10190004 Canada patent #2850385

Substrate Suitability

Raw Concrete (Smooth) Very Good Polished Concrete (Sealed) Excellent **Decorative Concrete** Excellent **Brushed Concrete** Good **Aged Concrete** Excellent **Acid Washed Concrete** Poor Stairs Good

Terrazzo Excellent Hardwood (Sealed) Good

HT Mat 800 sq. ft./roll 6.5'W x 123'L 96 lbs.

Base Coat 5 gallon pail

Base Coat Spread Rates

Smooth/

Troweled Surfaces 130 sq. ft./gal

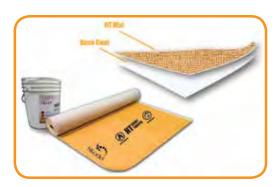

Textured/Medium Significantly Broomed finish lower than the

rate above

Application

The Skudo Commercial System is applied in two steps:

- 1. The water based Concrete Base Coat is applied using our Notched Squeegee Method. See application sheet for details.
- 2. The HT Mat is rolled out and pressed into wet Base Coat. For more information on detailed application, please refer to our Website, Product Application Sheet or Label.

NOTE: For a detailed explanation of Skudo Commercial Mat System usage, application process and limitations, please see our website which includes step-by-step instructions

Precautions

- Do not dilute.
- Should not be applied to concrete exposed to excessive moisture. Skudo must be kept dry for 24 hours after installation.
- Do not apply if the temperature of the concrete or air temperature is below 40° F (4° C).
- If installing over sealed, guarded or protected concrete or terrazzo, it is critical sealer is fully cured. Dry to the touch is not sufficient. Always consult a Skudo Representative for compatibility.
- If the Commercial System is exposed to excessive standing water, extremely heavy rainfall or drainagerunoff, water can soften the mat, breaking the bond between the protected substrate and Skudo Base Coat. If this occurs, normal lift traffic may damage the Mat. Drain or squeegee water off the affected area and attempt to keep traffic off the mat until it has dried. Once dried, the mat will return to its original strength and in most cases will re-adhere to the substrate.

After Installation, remove any visible Base Coat after allowing it to completely dry, then peel up. Any attempts to wipe up or press in the exposed wet Base Coat will negate its film forming properties making removal extremely difficult. UV exposure degrades the peelability of the Base Coat.

Innovative, purpose-built surface protection systems. This is all we do.

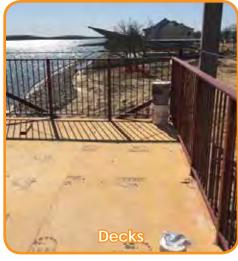

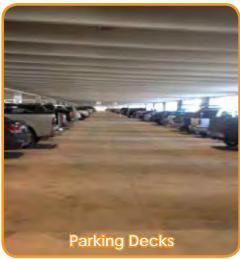

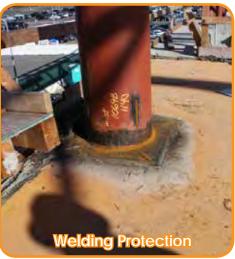

Heavy Traffic (HT) Commercial System Project Examples

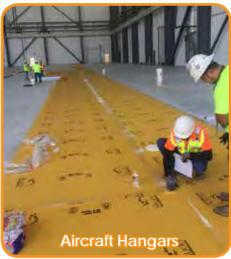

Innovative, purpose-built surface protection systems. This is all we do.

Construction Marks/Layouts - Project Examples

Skudo HT Commercial System

Adheres and remains stationary • Use for all types of construction layouts • Fire Retardant No need to worry about staining • Won't rub off or wash away • Antibacterial/Antimicrobial

Use for: Wall Layouts, Anchor Points, HVAC Lines, Sprinkler Lines, Plumbing Lines, Door & Window Jambs, Wrapped Openings, Electric Trays, Ceiling Grids, Overhead Units, and more!

Description

The Skudo MT (Medium Traffic) Commercial System provides temporary surface protection on interior commercial construction jobs. It is comprised of a flexible, peelable Concrete Base Coat and the MT (Medium Traffic) Mat, which together create a homogeneous covering that does not permit contaminants or debris to get between it and the substrate it's protecting.

The MT Commercial System protects against mold, impact and light machinery. With the highest level of slip resistance of all the Skudo products, the MT Mat also provides a safe working environment with a non-slip, seamless and stationary work surface. MT Commercial can protect surfaces up to 9 months.

(NOTE: Interior use only)

Once the project is completed, the MT Mat is simply peeled up and disposed of in general site garbage bins.

Uses

- Protects most surfaces, including freshly placed concrete as early as 21 days.
 - *Note: This is subject to slab thickness, mix design, weather, etc. Please contact your Skudo Rep to determine suitability
- Protects polished concrete and terrazzo
- Under Scaffolding & Shoring, Light Machinery

Benefits

- Reliable surface protection for Medium construction site traffic
- Spill, stain and water resistance
- Resistance to impact
- Antibacterial/Antifungal: Test-verified protection against bacteria and molds that cause infection. (ISO-20743)
- Safer working surface
- High slip resistance in wet and dry conditions

NOTE: For a detailed explanation of Skudo Commercial Mat System usage, application process and limitations, please see our website which includes step-by-step instructions

Precautions

- Do not dilute.
- Should not be applied to concrete exposed to excessive moisture. Skudo must be kept dry for 24 hours after installation.
- Do not apply if the temperature of the concrete or air temperature is below 40° F (4° C).
- If installing over sealed, guarded or protected concrete or terrazzo, it is critical sealer is fully cured.
 Dry to the touch is not sufficient. Always consult a Skudo Representative for compatibility.
- If the Commercial System is exposed to excessive standing water, extremely heavy rainfall or drainagerunoff, water can soften the mat, breaking the bond between the protected substrate and Skudo Base Coat. If this occurs, normal lift traffic may damage the Mat. Drain or squeegee water off the affected area and attempt to keep traffic off the mat until it has dried. Once dried, the mat will return to its original strength and in most cases will re-adhere to the substrate.

After Installation, remove any visible Base Coat after allowing it to completely dry, then peel up. Any attempts to wipe up or press in the exposed wet Base Coat will negate its film forming properties making removal extremely difficult. UV exposure degrades the peelability of the Base Coat.

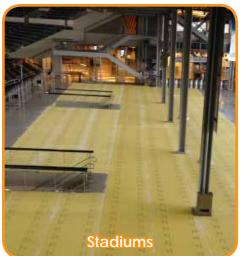

Medium Traffic (MT) Commercial System Project Examples

NOTE: MT Commercial System is intended for INTERIOR USE ONLY.

Application Preparation & Summary

PREPARATION

IMPORTANT: Before applying the Skudo Mat System:

· Ensure Skudo is suitable for the substrate on which it will be

NOTE: avoid applying Skudo to unsealed hardwood, carpet, rubber, painted surfaces, weak or latex based grout, unfilled travertine, pavers, high pH substrates (above 11.0), linoleums and vinyls that are effected by high pH of Base Coat (See www.SkudoUSA.com for complete details)

- Ensure the surface pH is below 11.0 and relative humidity (RH) is 90% or lower.
- Ensure the surface temperature is above 40 and below 105 degrees F.
- Do not apply the system externally if rain is likely within 24 hours.
- · If applied, ensure all densifiers, grouts, sealers, guards, epoxies, etc. have been cured / burnished to their manufacturer specifications (touch dry is not sufficient). In some instances, it is beneficial to wait to apply any topical coatings (sealers, etc.) until after Skudo has been removed. Consult Skudo representative if uncertain.
- · Ensure the area is clean and free from any foreign materials that will contaminate or compromise the Base Coat.

Always spot test Skudo to specific job site conditions

Thoroughly sweep the surface to ensure the area is clean and free of debris/foreign materials that will compromise and contaminate the Base Coat.

JOB ASSESSMENT CONSIDERATIONS

Know which grade of Skudo you are applying (Orange-HT or Yellow-MT), and adhere to the limitations listed in the Product Data, including:

- 1. Expected Construction Traffic
- Machinery HT can handle moderate machinery, MT can handle infrequent and light machinery.
 Shoring & Scaffolding – Both HT and MT Mat can handle.

2. Job duration and location

If the job is exterior, you should be using HT only. The average on site life of Skudo Mats is as follows:

- HT Mat Up to 12 months MT Mat Up to 9 months
- 3. Water and spill resistance:
- HT offers the highest water and spill resistance. MT offers moderate resistance.

SPREAD RATES

It is critical that the Skudo Base Coat be applied consistently to a thickness of at least 10 mils wet.

The spread rates of the Base Coat will vary due to weather and how porous the substrate is on which it will be applied.

- On flat sealed continuous substrates the Base Coat will yield approximately 130 sq. ft. per gallon.
- On raw concrete or substrates with a lot of undulation or grout lines the yield can significantly drop below the rate above.

BASE COAT APPLICATION METHODS & TOOLS

NOTCHED SQUEEGEE & BACK ROLL

(1) Skudo Commercial Mat Squeegee Installation Pack

Application Rate 10,000-12,000 SF/ Day

<u>Preparation</u> Thoroughly soak Back roller cover in Base Coat Sweep debris off area

Clean up

Throw away roller covers when done Overnight - submerge roller in Base Coat

Crew Needed

ONCE APPLIED

Once applied, clear the area of any traffic and cordon off the area for at least 3 hours to allow Skudo to fully dry (HT will take longer to dry, but it will be able to take foot traffic after 3 hours and machines the next day). Dry time may vary due to substrate temperature and porosity of the surface.

Tools and equipment should be washed out using warm soapy water.

Although the Skudo Base Coat is classed as Non Hazardous, avoid wash out entering drains, waterways and finished surfaces. Please refer to the SDS for more information.

PATCHING & MAINTENANCE

Should the Skudo Mats require patching, lift up the tear, apply fresh Base Coat underneath and press the Mat back down. Alternatively, you may apply a new section of the Skudo Mat with Base Coat over the hole.

When ready to remove the Skudo Mat, work with a partner and simply lift a corner and peel it back at a 45 degree angle. To make the process easier and faster, nip the edge at 2 to 3 foot widths and tear it into thinner strips. Dispose of the Mat in general site garbage

NOTE: Removal of the Mat when the temperature is below 36'F makes the System less peelable.

The time it takes to remove the Skudo Mat will depend upon factors such as the texture of the surface it was applied to, and whether or not there were any contaminants on the surface at the time of application.

RECOMMENDED: Use the Skudo Mat Puller to give more leverage and make the removal process easier on your hands.

Protected in the United States by patent #10190004 Canada patent #2850385

Innovative, purpose-built surface protection systems. This is all we do.

Application Guide

Step 1

Start with the Skudo Mat in a corner of the area to be covered.

Roll the Mat out 3 to 4 feet and align with a wall or edge of slab to ensure a straight roll out.

Lift the rolled out section over the rolled up portion of the Mat

Step 2

After soaking the Back Roller in Base Coat, begin applying the Base Coat directly onto the surface using the Notched Squeegee and Back Roller. Make sure the Base Coat is applied in a consistent coat with a thickness of 10 Mils wet.

Apply it to the surface across the **entire width** of the Skudo Mat roll.

Note: Rough or textured surfaces will require a thicker application of Base Coat.

Step 3

Lay the rolled out section of Skudo Mat back onto the wet Base Coat and press it in immediately, using either the Skudo Roller or a dry paint roller.

It is critical that the Skudo Mat is uniformly pressed into the Base Coat.

This now becomes the anchor for the rest of the roll.

Step 4

Continue to apply the Base Coat again in front of the roll.

When using the Skudo Notched Squeegee, ensure to pull the product away from the roll before back rolling.

Press in the Skudo Mat as you go, repeat process until the end of the row, taking note to ensure Base Coat thickness is **10 Mils wet**. Once applied, do not lift the Mat.

Step 5

Start the next row with the Skudo Mat as per Step 1, overlapping the edge up to the guide line. Roll out 4 to 5 feet of the Mat for alignment.

This will ensure that the next section will be straight and will not drift off this line further down the area of application.

Note:

The Base Coat can be used to adhere the overlap.

This makes the system more water tight which is important for projects that have not been dried in yet.

IMPORTANT: The Base Coat will dry clear (not white). Failure to apply correct thickness or properly 'Press' in the Mat may result in a poor lamination and possible failure on peel.

Slip Resistant Surface

Perfect for stairs

Commercial Bath

Durable

Description

Skudo's Heavy Traffic (HT) Construction Tack-Mat offers outstanding temporary surface protection for horizontal indoor surfaces including floors and stairs. HT Tack-Mat features a unique self-stick surface - simply peel the backing paper and apply.

HT Tack-Mat provides interior surface protection for commercial and residential projects for up to 12 months.

Benefits

- Strong bond with the surface blocks any dirt and debris from staining or damaging the protected substrate
- Provides protection from machinery, carts and foot traffic
- Protects from small spills of many chemicals, solvents, paints, and oils.
- Slip resistant surface that is seamless and stationary
- Protects against color changing UV rays
- Can be used in any temperature: -20°F to +200°F
- Proven Fire/Flame retardant according to Class 1 ASTM E 648 and NFPA 253 standards.
- Antibacterial/Antifungal: Test-verified protection against bacteria and molds that cause infection. (ISO-20743)
- Easy to adjust or inspect surface, simply peel up and reposition

Uses

Protects all surfaces during construction/remodeling including:

- Marble, Granite, and Stone *
- Hardwood* and laminate
- Ceramic and Porcelain Tile
- Glass, Epoxies, and Metals
- Sheet Vinyl
- Showers, bathtubs, and countertops

^{*}Please see "Limitations" section (pg 2)

Application & Removal

All Skudo Tack-Mat products are easily applied by peeling off the release paper and pressing down onto the surface. Apply seam tape to the overlap joints to firmly secure. Simply peel up Tack-Mat leaving a clean, undamaged surface.

For detailed step-by-step Tack-Mat application directions and video, please visit our website: www.skudousa.com/how-to-apply/skudo-tack-mat/

Easy Application

Heavy Traffic (HT) Tack-Mat Product Data

Width : 40"
Roll Weight : 90 lbs
Length : 165'
Color : Orange

Surface Area : 550 SF
 Product SKU : TM-HT-3.3-165

Mat Thickness : 1/16"

Limitations

- INTERIOR USE ONLY. Skudo HT Tack-Mat is intended for interior use only and is not suited for areas that will be exposed to inclement weather and wind. If exposure to the elements is a concern, Skudo recommends the Heavy Traffic (HT) Commercial Mat System. Please consult with your Skudo representative for more details.
- All adhesives have the potential to lift finished coatings or paint depending on the condition and age of the surface.
 Testing a small piece in a non-critical area will help you judge suitability for use.
- If applying to hardwood flooring, only use Skudo Tack-Mat on sealed hardwood with a hard wearing factory finished surface (eg: Aluminum Oxide). If in question, please contact Skudo for suitability testing.

- Skudo Tack-Mat should NOT be applied to:
 - Polished Concrete
 - Concrete that has not fully cured
 - Limestone
 - Non-factory finished hardwood flooring
 - Any exterior surfaces

Please consult with your Skudo representative to determine which Skudo product is best for your project.

Heavy Traffic (HT) Tack-Mat Project Examples

Description

Skudo's Light Traffic (LT) Construction Tack-Mat offers outstanding temporary surface protection that is easy to apply to both vertical and horizontal indoor surfaces, around corners such as stairs and door jambs, on countertops, cabinets, windows and more. LT Tack-Mat features a unique self-stick surface - simply peel the backing paper and apply.

LT Tack-Mat provides interior surface protection for commercial and residential projects for up to 12 months.

- Strong bond with the surface blocks any dirt and debris from ever coming into contact with the protected substrate
- Impact protection from carts and foot traffic
- Stain proof protection from small spills of chemicals, solvents, paints, oils etc.
- Provides a slip resistant surface that is seamless and stationary
- Can be used in any temperature: -20°F to +200°F
- Easy to adjust or inspect surface, simply peel up and reposition

Uses

Protects all surfaces during construction / remodeling including:

- Marble, Granite, & Stone*
- Hardwood* and laminate
- Ceramic and Porcelain Tile
- Glass, Epoxies, and Metals
- Sheet Vinyl
- Vertical surfaces, such as walls, cabinets, doors, framing, and stairs
- Showers, bathtubs, and countertops

Light Traffic (LT) Tack-Mat Project Examples

Innovative, purpose-built surface protection systems. This is all we do.

Extreme Protection - High Impact

The HIGH IMPACT version of the Skudo Tack-Mat offers superior impact resistance in addition to the usual temporary surface protection expected from Skudo's products. Like all Skudo Tack-Mat products, the HIGH IMPACT product features a unique repositionable self-stick backing - simply peel the backing paper and apply. The HIGH IMPACT Tack-Mat can be used on both horizontal and vertical interior surfaces, around corners such as stairs and door jambs, on countertops, cabinets, windows and more.

HIGH IMPACT Tack-Mat provides interior surface protection for commercial and residential projects for up to 12 months.

- Superior impact resistance for delicate surfaces
- Strong bond blocks dirt and debris from contact with the protected surface
- Stain resistant protection against chemicals, solvents, paints, oils and other liquids
- Provides a durable, slip resistant stationary surface
- Can be used in any temperature: -20°F to +200°F
- Easy to adjust or inspect surface, simply peel up and reposition

Uses

Protects all surfaces during construction / remodeling including:

- Marble, Granite, & Stone*
- Hardwood* and laminate
- Ceramic and Porcelain Tile
- Glass, Epoxies, and Metals
- Sheet Vinyl
- Vertical surfaces, such as walls, cabinets, doors, framing, and stairs

COUNTER

Description

Skudo Counter-Mat has been specifically designed to provide perfect protection for countertops, kitchen/bath surfaces, and other small areas during construction. Counter-Mat's laborsaving 27 inch width reduces the need to cut down rolls, helping to eliminate project waste. Also, like all Skudo Tack-Mat products, Counter-Mat features a unique self-stick surface - simply peel the backing paper and apply.

Skudo Counter-Mat provides interior surface protection for commercial and residential projects for up to 12 months.

Impact protection

Strong bond with the surface blocks dirt and debris from coming into contact with the protected substrate

- Impact protection from carts, ladders, tools, and more
- Stain proof protection from small spills of chemicals, solvents, paints, oils etc.
- Seamless and stationary won't move out of place
- Can be used in any temperature: -20°F to +200°F
- · Easy to adjust or inspect surface, simply peel up and reposition

- If applying to hardwood flooring, only use Skudo Tack-Mat on sealed hardwood with a hard wearing factory finished surface (eg: Aluminum Oxide). If in question, please contact Skudo for suitability testing.

- If applying vertically, space must be conditioned. Humidity can cause this system to release from the substrate.
- Skudo Tack-Mat should NOT be applied to:
 - Polished Concrete
 - Concrete that has not fully cured
 - Limestone
 - Non-factory finished hardwood flooring
 - Any exterior surfaces

Please consult with your Skudo representative to determine which Skudo product is best for your project.

Skudo Tack-Mat Application Guide

This guide is applicable to the following product lines: Skudo Heavy Traffic (HT) Tack-Mat, Light Traffic (LT) Tack-Mat, High Impact (HI) Tack-Mat, Edge Protect Tack-Mat, and Counter Mat

IMPORTANT - Read Before Applying:

- Skudo Tack-Mat should NOT be applied to:
 - Concrete
 - Limestone
 - Non-factory finished hardwood flooring
- INTERIOR USE ONLY. All Skudo Tack-Mat products are intended for interior use only and is not suited for areas that will be exposed to inclement weather and wind. If exposure to the elements is a concern, Skudo recommends the Heavy Traffic (HT) Commercial Mat System. Please consult with your Skudo representative for more details.
- All adhesives have the potential to lift finished coatings or paint depending on the condition and age of the surface.

- Testing a small piece in a non-critical area will help you judge suitability for use.
- If applying to hardwood flooring, only use Skudo Tack-Mat on sealed hardwood with a hard wearing factory finished surface (eg: Aluminum Oxide). If in question, please contact Skudo for suitability testing.
- Tack Mat can be applied to vertical surfaces.
 However, space must be conditioned as humidity can cause this system to release from the substrate
- Always consult with your Skudo Representative to determine which Skudo product is best suited for your project.

STEP 1

Peel back 3 to 4 feet of the release paper from the back of the mat. Fold this back underneath the Tack-Mat roll.

STFP 2

Align the roll to ensure a straight application. Attach the tacky side to the surface and press in the mot firmly.

STEP 3

When first roll is completed, begin the second row, overlapping the mat by 2 inches. On HT Tack-Mat and also for extra durability on LT and HI Tack-Mat, apply vinyl or duct tape to the overlap joints.

STEP 4

Continue installing until the entire area is protected. Tack-Mat can be lifted for inspection or to smooth out wrinkles and press back into place.

Your surface is now protected.

APPLICATION ON STAIRS

Start at the bottom and pull the release paper up while moving the roll up the stairs. Press the Tack-Mat onto all the treads and risers.

For detailed step-by-step Tack-Mat application directions and video, please visit our website.

USE ON VERTICAL SURFACES

For use on vertical surfaces, simply peel the release paper and fully press the Tack-Mat into the surface to be protected.

Please note that for vertical application, the space must be conditioned in order to prevent the mat from prematurely separating from the substrate.

Innovative, purpose-built surface protection systems. This is all we do.

All-Terrain Mat

All-Terrain Mat provides an extremely durable traffic zone on loose and unprepared ground on construction sites for use by workers, contractors, and their clients.

All-Terrain Mat provides a heavy duty surface (1/2 inch thick) with a free draining structure that allows dirt and water to pass through. This provides a very high level of slip resistance for both wet and dry conditions.

All-Terrain Mat offers excellent durability and resistance to heavy wear & tear.

Uses:

- Provides a safe walkway over gravel, rocks, mud, snow & ice.
- Excellent walk off mat to keep your site & job trailers clean.
- Directs traffic safely through heavy construction zones.
- Anti-fatigue properties for workers.

Features:

- Extremely durable construction that allows water & soil to pass through the mat.
- Thick & heavy so it stays in place in challenging conditions.
- Test-proven protection against flame & freeze. (FMVSS 302-1998)
- Can be pegged down as needed.

For jobsites with rough terrain, heavy rain, mud, snow and ice, Skudo's All-Terrain Mat is the solution.

Thick, Heavy Duty Surface

Perfect for Workers. Contractors, & Clients

Stays in Place Over Harsh Terrain

Traps Dirt & Debris

Use over Mud & Rocks

Perfect for Beach Access Paths

Safely Direct Traffic through a Jobsite - including TPO Roofs

All-Terrain Mat Product Details

Part # = AT-3K-3.3-33-ORANGE

Dimensions:

• Mat Width = 3.3 feet

• Mat Length = 33 feet

Mat Weight = 75 lbs per roll

• Roll Diameter = 16 in. (approx)

Product Thickness = 0.5 in. (approx)

Composition: Specially desgined non-absorbent Vinyl loop coils extruded from 100% PVC and

thermally bonded. DOP Free.

Appearance: Orange vinyl loop coiled mat

Fire resistance: In accordance with -

US CPSC 16 CFR Part 1631 (FF2-70)

Frost Resistance: Withstand -13°F without break

Tensile Strength: In accordance with ASTM D5034-2009

Crosswise - 3997N Lengthwise - 3923N

Tear Strength: In accordance with ASTM D5034-2009

Crosswise - 1342N Lengthwise - 1216N

Slip Resistance: In reference to to GB/t 4100-2006

Friction Coefficient (DRY) - 0.685 Friction Coefficient (WET) - 0.580

REACH: In accordance with EC No 1907/2006 - PASS

Packaging: 6 or 8 rolls per pallet

All-Terrain Mat Project Examples

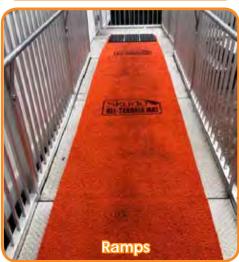

Description

SkudoBoard is a heavy duty, synthetic, rigid board that provides superior protection under forklift and general construction traffic. Use wherever you would protect your surfaces with Masonite or plywood. Ideal for use under work stations - pipe cutting, finish carpentry, painting.

The textured surface of SkudoBoard is fire retardant, water resistant and resists curling and warping - reducing safety hazards on your jobsite. The high compression strength protects from dropping objects and spreads the load under forklifts, keeping your floors safe. It can also be used for extreme vertical protection.

SkudoBoard is also available in a **Fabric Back** version - which features a unique fabric underside to make it safer for surface types like tile, stone, marble, vinyl, hardwood, etc. without fear of damage, chips, and scratches.

Features & Benefits

- Water resistant, can be used on exterior surfaces
- Fire Retardant (ATSM E Class 1, 16 CFR 1630)
- Test-proven slip resistance in wet conditions (ANSI/NFSI B101.3-2012)
- Extremely high impact resistance spreads impact loads
- Ideal for use under work stations i.e. pipe cutting, finish carpentry, painting.
- Ideal for forklift and material cart protection
- Well suited for protecting floors from work station traffic and debris
- Light weight, easy to handle and reusable
- Replaces curling Masonite and plywood
- Far superior to cardboard protection products
- Fabric Back version now available for additional protection from surface damage

High impact protection

Water resistant, resists curling and warping

Use under ladders, carts, and workstations

Fabric Back version available for additional protection

INTERLOCK

Description

SkudoBoard INTERLOCK is a heavy duty, synthetic, rigid board that provides superior protection under forklift and general construction traffic. The interlocking tabs also keep the board from slipping and moving out of place.

Use SkudoBoard Interlock wherever you would traditionally protect your surfaces with Masonite or plywood. Ideal for use under work stations - pipe cutting, finish carpentry, painting. Easy to layout and repack for quick mobilization on after-hours projects.

The textured surface of SkudoBoard INTERLOCK provides high slip resistance in addition to being fire retardant and water resistant. SkudoBoard INTERLOCK does not curl or warp - reducing safety hazards on your jobsite. The high compression strength protects from dropping objects and spreads the load under forklifts, keeping your floors safe. It can also be used for extreme vertical protection.

Features & Benefits

- Interlocking tabs keep SkudoBoard securely in place
- Water resistant, can be used on exterior surfaces
- Replaces curling Masonite and plywood
- Fire Retardant (ATSM E Class 1, 16 CFR 1630)
- Test-proven slip resistance in wet conditions (ANSI/NFSI B101.3-2012)
- Extremely high impact resistance spreads impact loads
- Ideal for use under work stations i.e. pipe cutting, finish carpentry, painting.
- Ideal for forklift and material cart protection
- Well suited for protecting floors from jobsite traffic and debris
- Light weight, easy to handle and reusable
- Far superior to cardboard protection products
- Edge pieces included to fill in gaps when placing against walls

COLUMN GUARD

Description

SkudoBoard COLUMN GUARD is a heavy duty, synthetic, flexible version of SkudoBoard product line that provides superior protection to columns and pillars during construction. Column Guard protects the surface from damage from splatter, spills, scuff marks, and scratches, carts, supplies and equipment.

The textured surface of Column Guard is water resistant and won't curl, warp, or unravel - reducing safety hazards on your jobsite. Use wherever you would protect your columns with cardboard, plastic, masonite or plywood.

Features & Benefits

- Water resistant, approved for exterior use
- Replaces curling Masonite and plywood
- Extremely high impact resistance
- Ideal for forklift and material cart protection
- Well suited for protecting columns from jobsite traffic and impact
- · Light weight, easy to handle and reusable
- Far superior to cardboard and plastic protection products

SkudoBoard Column Guard Product Data

• Dimensions: 4' x 250'

• Square Footage: 1000 sq. ft./roll

Product #BOARD-COLUMN-4x250-220#

• Weight: 200 lbs/roll

• Thickness:1/8"

· Color: Black, Grey

Extremely high impact resistance

Stays in place - won't unravel

Easy to handle, reusable

No damage from jobsite materials

SkudoBoard Project Examples

Description

Skudo Glass Advanced is the perfect solution for all construction projects that require temporary window and glass protection from start to finish.

Tough enough to withstand cement and paint splatter, Skudo Glass

Advanced will protect valuable glass and frames for up to 12 months.

Benefits

- Resists job site spills and splatter, including cement, paint and stucco
- Can be applied at manufacturer to provide protection during transit
- Fire Resistant to withstand welding and grinding sparks
- Simple application with spray or roller
- Easy peel off removal
- Available in blue (transparent) or white (opaque) finish

Uses

Skudo Glass Advanced can be applied to:

- Glass, Windows, Curtain Walls, Panels and Balustrades
- Metals, such as Stainless Steel and Aluminum
- Cladding

Skudo Glass Advanced is **not** suitable to be applied on <u>acrylic surfaces</u>, but it can be used on 'Low-e' (low emissivity) glass.

Application & Removal

Skudo Glass Advanced is easily applied by roller or sprayer. One gallon will cover up to 150 sq ft. Two coats should be applied for best results. Note that Glass Advanced will typically dry quickly, but dry time can vary according to the relative humidity and ambient temperature. Maximum strength will be achieved in 3 days. After 3 days and up to 12 months after application, Skudo Glass Advanced can be removed. Simply peel it off to reveal a clean, undamaged surface with no residue.

UP TO 12

MONTHS

APPLICATION GUIDE

Skudo

SIDE 1

BEFORE YOU BEGIN APPLICATION...

- Skudo Glass Advanced to a small area to test the substrate's suitability. You must ensure that all substrates are covered. Allow the product to dry for 48 hours, and then check that the product will peel away from each substrate.
 - NOTE Do not apply Skudo Glass Advanced to Acrylic surfaces. It will bond permanently.
- Masking Mask all areas that you don't intend to coat with Skudo Glass Advanced. Items such as locks, handles and vents should always be masked with a suitable tape. Always remove the tape once the product has been applied and is still wet.
- 1. Test Area & Test Peel You must always apply 3. Weather Skudo Glass Advanced cannot 5. Wet Film Thickness be applied if the temperature is below freezing or in rainfall. If the surface is likely to be exposed to direct rainfall before the product has dried, do not apply.
 - 4. Stir Product Remove the lid and stir the product thoroughly before use. Skudo Glass Advanced a 12 month shelf life see product's label for more detailed information. Α skin may have formed when the lid is removed for the second time. Simply cut the skin away and then stir the Skudo product. Do not stir the skin into the product.
- Ensure you have a wet film gauge. Skudo Glass Advanced requires а

(WFT) of 10 Mils.

minimum wet film thickness

APPLICATION BY ROLLER

We recommend that you use a 3/8 Nap lambswool roller for application. Ensure that you have followed the "Before you Begin Application" section.

1. Once you have masked off the area, apply a base coat of Skudo to the substrate paying particular attention to vulnerable areas such as corners. Allow to dry for 15 minutes or until coating is tacky.

2. Apply a second, thicker coating, again paying particular attention to corners. If the coating is too thin in these areas it will be difficult to remove. Dry time will take up to 15 minutues, depending on weather conditions.

3. Use a wet film gauge to check the coating's wet film thickness (WFT) is at least 10

4. Remove the masking tape while the product is still wet. This helps to achieve a good thick edge that is easier to peel when the product is no longer required.

5. Leave to dry in a rain free environment and allow 2 hours at room temperature to dry. The product will gain maximum strength after 3 days.

6. After application, rollers and any other equipment should be washed thoroughly in cold

7. When required, Skudo is removed by hand peeling. Do not remove in freezing conditions - the product will be brittle and will not peel properly.

Repair: If the coating is damaged at a later date, a new coating of Skudo Glass Advanced can be applied over the damaged area. It will bond to itself and provide seamless protection.

APPLICATION GUIDE

Skudo

SIDE 2

APPLICATION BY SPRAY

If you use an airless spray gun, we recommend a minimum tip size of 0.021" (eg: 321, 323 or 325) and that you use a shield to protect against overspray on brick work, stucco, etc. Ensure that you have followed the "Before you Begin Application" section.

1. You need to purge the spray equipment begin before you application. First place the inlet suction hose into the Skudo container and purge the airless spray pump with material. Then purge the airless spray gun and test the spray pattern.

2. Point the nozzle at the area you wish to protect and hold the spray gun 12-15 inches from the substrate. Use a shield to prevent overspray.

3. Release the safety catch and start spraying in a horizontal direction. Keep the gun at right angles to the surface. This means moving your entire arm back and forth rather than flexing the wrist.

4. Release the trigger at the end of each stroke. Then depress the trigger and overlap the previous pass by 50%. Continue in this fashion for consistent coverage working down the substrate.

5. When the surface is fully covered, repeat with the spray process in a vertical direction. Care should be taken to ensure that corners and inside edges are coated thoroughly. If the coating is too thin in these areas it may become difficult to remove.

6. Use a wet film gauge to check that the coating's wet film thickness (WFT) is at least 10 Mils. Remove any masking tape while the product is still wet.

7. Once spraying is complete, clean the gun using cold water. Failure to clean the gun will result in problems next time the gun is used.

8. Leave to dry in a rain 9. When required Skudo temperature to dry. The product will gain maximum strength after 3 days.

free environment and is removed by hand allow 2 hours at room peeling. Do not remove in freezing conditions the product will be brittle and not peel properly. The coating can be condensed into a small ball and disposed of.

Repair: If the coating is damaged at a later date, a new coating of Skudo Glass Advanced can be applied over the damaged area. It will bond to itself and provide seamless protection.

Disclaimer: Skudo Glass Advanced should not be applied to acrylic surfaces. It will bond permanently. Skudo Glass Advanced can be used on Low-e (low emissivity) glass.

HT Commercial Mat **Product Name:**

Jan 2012 **Issue Date: Issued By:** Skudo LLC

1. IDENTIFICATION

Product Name: Skudo HT Commercial Mat

Product Code: CM-HT-6.5-123

Product Use: Temporary Surface Protection

Company Name: Skudo LLC

11120 Zodiac Ln Address:

Dallas, TX 75229

Telephone: 1-888-758-3611 (1-888-SKUDO-11)

Fax: 972-993-0700

2. HAZARDS INDENTIFICATION

Main hazards: No significant hazard.

3. COMPOSITION / INFORMATION ON INGREDIENTS

| NAME: | <u>CAS:</u> | PROPORTION: |
|----------------------------|--------------|--------------------|
| Polyethylene terephthalate | 25 038-59-9 | 40-60% |
| Styrene/Acrylate | confidential | 15-25% |
| Bitumen | 8052-42-4 | 0-5% |
| Alumina tri-hydrate | 21645-51-2 | 20-35% |

4. FIRST AID MEASURES

Swallowed: No special measures necessary.

Eye: Rinse with plenty of water, if persistent irritation, see a physician.

Skin: Wash skin thoroughly with soap and water.

Inhaled: Inhalation of fiber fly, dust and finish decomposition products should be avoided

by fresh air ventilation. In case of coughing or other symptoms, the person should seek

fresh air and, if necessary a physician.

First Aid Facilities: Eye wash fountains and safety showers should be easily accessible.

5. FIRE-FIGHTING MEASURES

Fire hazards: Product will burn in a fire. Auto ignition temperature: 960 deg F (DIN 51794)

Thermal decomposition: > 570 deg F

Fire/Explosion Hazard: Fiber dust and fly could present a fire hazard at sufficient concentrations.

Remove ignition sources. Beware of electrostatic charges.

Fire Fighting Wear full body protective clothing and self-contained breathing apparatus.

Procedures: Water spray, foam, CO² or dry chemical. Do not use water if fire is caused

by an electrical short circuit.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions: Refer to section 8 of SDS for personal protection details.

7. HANDLING AND STORAGE

Storage Precautions: Store in a dry place. Store away from foodstuffs, clothing and keep out of reach of

children.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Acute - Swallowed: No special measures necessary.

Acute - EyeRinse with plenty of water, if persistent irritation, see a physician.Acute - Skin:Prolonged or repeated contact with skin may result in irritation or rash.Acute - Inhaled:Inhalation hazards of this product are negligible pending possible imposition

of threshold limit values. Therefore no special precautionary measures are

necessary.

Chronic: Principal routes of exposure are usually by skin contact with the material. Prolonged or

repeated skin contact with bare skin may cause drying, cracking, irritation and possible

dermatitis if sufficient water is present to extract surfactants from the coating.

Respirator Type: Not required for normal operations, but where work practice or other means

(AS 1716) exposure reduction is not adequate, approved respirator may be necessary to prevent over

exposure by inhalation.

Eye Protection: Safety goggles for cutting and handling is recommended.

Glove Type: Standard work gloves for frequent handling.

Clothing: Overalls.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance: Orange coated NW fabric

Odor: odorless Form: solid

10. STABILITITY AND REACTIVITY

Boiling Point:Not applicableVapor Pressure:Not applicableSolubility in Water:Not applicable

Stability: Stable

Specific Gravity: Not applicable **Flash Point:** Not applicable

11. TOXICOLOGICAL INFORMATION

Acute toxicity: SKUDO HT COMMERCIAL MAT

ORL RAT LD50 >2000 mg/kg

Routes of exposure: Refer to section 4 of SDS for routes of exposure and corresponding symptoms.

12. ECOLOGICAL INFORMATION

Hazardous Carbon monoxide, carbon dioxide and low molecular weight organic

Decomposition or Byproducts:

Compounds depending on temperature and air supply.

13. DISPOSAL CONSIDERATIONS

Disposal: Bury in an approved landfill. Dispose of in accordance with Local, State and Federal

Governments. If recycling is not possible, Polyester can be disposed of in a suitable refuse installation or incinerated subject to local regulations.

14. TRANSPORTATION INFORMATION

Classification: Not defined as Dangerous Goods by DOT for road or rail. Class 65

15. REGULATORY INFORMATION

Pkg & Labeling: No regulatory requirements for transport, storage and handling.

Note: The regulatory information given above only indicates the principal regulations specifically

applicable to the product described in the safety data sheet. The user's attention is drawn to the possible existence of additional provisions which complete these regulations. Refer to all applicable

national, international and local regulations or provisions.

16. OTHER INFORMATION

SECTION 4. FIRST AID MEASURES

Move to fresh air in case of accidental inhalation of vapours.

If inhaled Oxygen or artificial respiration if needed.

Call a physician or poison control centre immediately.

If symptoms persist, call a physician.

Wash off immediately with soap and plenty of water while In case of skin contact

removing all contaminated clothes and shoes. If symptoms

persist, call a physician.

In case of eye contact : In case of eye contact, remove contact lens and rinse

immediately with plenty of water, also under the eyelids, for at

least 15 minutes.

Keep eye wide open while rinsing.

Remove contact lenses. Seek medical advice.

If swallowed : Do NOT induce vomiting.

> If symptoms persist, call a physician. If conscious, drink plenty of water.

Never give anything by mouth to an unconscious person.

Most important symptoms and

effects, both acute and

delayed

: None known.

SECTION 5. FIREFIGHTING MEASURES

Suitable extinguishing media : Foam

Carbon dioxide (CO2)

ABC powder Water mist

Specific hazards during firefighting : Burning produces irritant fumes.

Exposure to decomposition products may be a hazard to

health.

Cool closed containers exposed to fire with water spray. Do not allow run-off from fire fighting to enter drains or water

courses.

Specific extinguishing methods : Use extinguishing measures that are appropriate to local

circumstances and the surrounding environment. Use water spray to cool unopened containers.

Fire residues and contaminated fire extinguishing water must

be disposed of in accordance with local regulations.

Special protective equipment

for firefighters

: In the event of fire, wear self-contained breathing apparatus.

Use personal protective equipment.

Exposure to decomposition products may be a hazard to

health.

Version Revision Date: MSDS Number: Date of last issue: -

1.0 02/10/2016 F000001879 Date of first issue: 02/10/2016

SECTION 6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protec-

tive equipment and emer-

gency procedures

: Use personal protective equipment.

Ensure adequate ventilation.

Material can create slippery conditions.

Use non-slip safety shoes in areas where spills or leaks can

occur.

Environmental precautions : Prevent further leakage or spillage if safe to do so.

Do not let product enter drains.

Do not allow contact with soil, surface or ground water. Do not allow uncontrolled discharge of product into the

environment.

Methods and materials for

containment and cleaning up

: Dam up.

Soak up with inert absorbent material (e.g. sand, silica gel,

acid binder, universal binder, sawdust).

Sweep up and shovel.

Pick up and transfer to properly labelled containers. Clean

contaminated floors and objects thoroughly while

observing environmental regulations.

SECTION 7. HANDLING AND STORAGE

Advice on protection against

fire and explosion

: Keep away from open flames, hot surfaces and sources of

ignition. No special protective measures against fire required.

Advice on safe handling : Wear personal protective equipment.

Handle with care.

Take care to avoid waste and spillage when weighing, loading

and mixing the product.

Conditions for safe storage : No smoking.

Keep in properly labelled containers.

Observe label precautions.

Keep containers tightly closed in a dry, cool and well-

ventilated place.

Materials to avoid : Do not freeze.

Keep away from food and drink. Keep away from tobacco products.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Components with workplace control parameters

Contains no substances with occupational exposure limit values.

Hazardous components without workplace control parameters

| Components | CAS-No. |
|------------------------------|-----------|
| 2-methyl-2H-isothiazol-3-one | 2682-20-4 |

Version Revision Date: MSDS Number: Date of last issue: -

1.0 02/10/2016 F000001879 Date of first issue: 02/10/2016

Engineering measures : Handle only in a place equipped with local exhaust (or

other appropriate exhaust).

Maintain air concentrations below occupational exposure

standards.

Personal protective equipment

Respiratory protection : No personal respiratory protective equipment normally

required.

When workers are facing concentrations above the exposure

limit they must use appropriate certified respirators. Use

NIOSH approved respiratory protection.

Hand protection

Material : Standard work gloves for frequent handling.

Eye protection : Safety glasses with side-shields

Tightly fitting safety goggles

Face-shield

Skin and body protection : Chemical resistant apron

Footwear protecting against chemicals Skin

should be washed after contact.

Change working clothes after each workshift.

Protective measures : Avoid contact with skin.

When using do not eat, drink or smoke.

Personal protective equipment comprising: suitable protective

gloves, safety goggles and protective clothing

The type of protective equipment must be selected according to the concentration and amount of the dangerous substance

at the specific workplace.

Hygiene measures : Do not smoke.

Keep away from food and drink.

Avoid contact with skin, eyes and clothing. Change working clothes after each workshift.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance : liquid

Colour : light cream

Odour : ammoniacal

SAFETY DATA SHEET

Skudo Concrete Base Coat

Version Revision Date: MSDS Number: Date of last issue: -

1.0 02/10/2016 F000001879 Date of first issue: 02/10/2016

pH : 9.5 - 10.5

VOC Content : 1.53 g/Ltr

Melting point/range : No data available

Boiling point/boiling range : > 200 °F

Flash point : No data available

Evaporation rate : No data available

Vapour pressure : No data available

Relative vapour density : No data available

Density : 958.4 kg/m3

Solubility(ies)

Water solubility : completely miscible

Solubility in other solvents : not determined

Partition coefficient: n-oc-

tanol/water

: No data available

SECTION 10. STABILITY AND REACTIVITY

Reactivity : Stable

Possibility of hazardous

reactions

: Stable under recommended storage conditions.

Conditions to avoid : Protect from frost.

Incompatible materials : Oxidizing agents

Strong acids and strong bases

Hazardous decomposition

products

: Carbon dioxide (CO2), carbon monoxide (CO), oxides of

nitrogen (NOx), dense black smoke.

SECTION 11. TOXICOLOGICAL INFORMATION

Acute toxicity

Product:

Acute oral toxicity : Remarks: This information is not available.

Acute inhalation toxicity : Remarks: This information is not available.

Acute dermal toxicity : Remarks: This information is not available.

Respiratory or skin sensitisation

Product:

Remarks: This information is not available.

Carcinogenicity

IARC No component of this product present at levels greater than or

equal to 0.1% is identified as probable, possible or confirmed

human carcinogen by IARC.

OSHA No component of this product present at levels greater than or

equal to 0.1% is identified as a carcinogen or potential

carcinogen by OSHA.

NTP No component of this product present at levels greater than or

equal to 0.1% is identified as a known or anticipated carcinogen

by NTP.

SECTION 12. ECOLOGICAL INFORMATION

Ecotoxicity

Product:

Toxicity to fish : Remarks: No data available

Toxicity to daphnia and other

aquatic invertebrates

: Remarks: No data available

Toxicity to algae : Remarks: No data available

Persistence and degradability

No data available

Bioaccumulative potential

No data available

Mobility in soil

No data available

Version Revision Date: MSDS Number: Date of last issue: -

1.0 02/10/2016 F000001879 Date of first issue: 02/10/2016

Other adverse effects

No data available

SECTION 13. DISPOSAL CONSIDERATIONS

Disposal methods

Waste from residues : Do not dispose of waste into sewer.

Dispose of in accordance with local regulations.

Can be landfilled or incinerated, when in compliance with local

regulations.

Contaminated packaging : Clean container with water.

Empty containers should be taken to an approved waste handling

site for recycling or disposal.

SECTION 14. TRANSPORT INFORMATION

International Regulation UNRTDG

Not regulated as a dangerous good

IATA-DGR

Not regulated as a dangerous good

IMDG-Code

Not regulated as a dangerous good

Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code Not

applicable for product as supplied.

National Regulations 49 CFR

Not regulated as a dangerous good

49 CFR

Not regulated as a dangerous good

SECTION 15. REGULATORY INFORMATION

SARA 302 : No chemicals in this material are subject to the reporting

requirements of SARA Title III, Section 302.

SARA 313 : This material does not contain any chemical components

with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III,

Section 313.

California Prop 65 WARNING: This product contains a chemical known to

the State of California to cause birth defects or other

reproductive harm.

The information provided in this Safety Data Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information given is designed only as a guidance for safe handling, use, processing, storage, transportation, disposal and release and is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text.

US / EN

PRODUCT NAME: HT Tack-Mat

ISSUE DATE: July 29, 2014

ISSUED BY: Skudo LLC

1. IDENTIFICATION OF THE SUBSTANCE / PREPARATION AND OF THE COMPANY / UNDERTAKING

Product name: SKUDO HT TACK MAT

Product code: 1130 TACK-MAT - HT

Use of substance /

Protective mat

preparation:

Company name: Skudo LLC

11120 Zodiac Ln

Dallas

TX

75229

USA

Tel: 972-993-0777 Fax: 972-993-0700

2. HAZARDS IDENTIFICATION

Main hazards: No significant hazard.

3. COMPOSITION / INFORMATION ON INGREDIENTS

Contains: Polyester film with modified acrylic adhesive.

4. FIRST AID MEASURES (SYMPTOMS)

Skin contact: No symptoms.

Eye contact: No symptoms.

Ingestion: It is unlikely that this substance will be swallowed due to its physical properties.

Inhalation: No symptoms.

5. FIRE-FIGHTING MEASURES

Extinguishing media: Suitable extinguishing media for the surrounding fire should be used.

Protection of fire-fighters: Wear self-contained breathing apparatus. Wear protective clothing to prevent contact with skin and

eyes

6. ACCIDENTAL RELEASE MEASURES

Personal precautions: Refer to section 8 of SDS for personal protection details.

7. HANDLING AND STORAGE

Storage Directions: Store in a dry place.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Respiratory protection: Respiratory protection not required.

9. PHYSICAL AND CHEMICAL PROPERTIES

State: Solid
Color: Orange
Odor: Odorless

10. STABILITY AND REACTIVITY

Stability: Stable under normal conditions.

11. TOXICOLOGICAL INFORMATION

Acute toxicity: SKUDO HT TACK MAT

ORL RAT LD50 >2000 mg/kg

Routes of exposure: Refer to section 4 of SDS for routes of exposure and corresponding symptoms.

12. ECOLOGICAL INFORMATION

Persistence and degradability: Biodegradable in part only.

13. DISPOSAL CONSIDERATIONS

Disposal operations: D10 Incineration on land. Skudo Tack-Mat is a non-hazardous waste in its fully treated form. It

may be disposed of with other non-hazardous waste streams, with the prior agreement of your waste

contractor.

Disposal of packaging: Dispose of as normal industrial waste.

NB: The user's attention is drawn to the possible existence of regional or national regulations regarding

disposal.

14. TRANSPORT INFORMATION

Classification: Not defined as Dangerous Goods by DOT for road or rail. Class 65.

15. REGULATORY INFORMATION

Hazard symbols: No significant hazard.

Note: The regulatory information given above only indicates the principal regulations specifically

applicable to the product described in the safety data sheet. The user's attention is drawn to the

possible existence of additional provisions which complete these regulations. Refer to all applicable

national, international and local regulations or provisions.

16. OTHER INFORMATION

Other information: This Material safety Data Sheet has been prepared in compliance with European Regulation (EC)

No. 1907/2006 (REACH)

Legal disclaimer: The above information is believed to be correct but does not purport to be all inclusive and shall be used

only as a guide. This company shall not be held liable for any damage resulting from handling or from

contact with the above product.

Skudo All-Terrain Mat

Safety Data Sheet (SDS)

SECTION 1: PRODUCT AND COMPANY IDENTIFICATION

PRODUCT NAME: Skudo All-Terrain Mat

MANUFACTURER: Skudo LLC
ADDRESS: 11120 Zodiac Ln
Dallas, TX 75229

EMERGENCY PHONE: 1-888-758-3611 or (972) 993-0777

Issue Date: 6/15/2018 **Supercedes Date:** Initial Issue

Product Use: Specific Use: Floor matting for outdoor and recessed well

areas, suitable for even the heaviest traffic conditions

SECTION 2: HAZARDS IDENTIFICATION

2.1 EMERGENCY OVERVIEW

Immediate health, physical, and environmental hazards:

This product, when used under reasonable conditions and in accordance with the Skudo directions for use, should not present a health hazard. However, use or processing of the product in a manner not in accordance with the product's directions for use may affect the performance of the product

and may present potential health and safety hazards.

2.2 POTENTIAL HEALTH EFFECTS

Eye Contact: No health effects are expected.

Skin Contact: No health effects are expected.

Inhalation: No health effects are expected.

Ingestion: No health effects are expected.

SECTION 3: COMPOSITION/INFORMATION ON INGREDIENTS

| <u>Ingredient</u> | C.A.S. No | % by Wt |

SECTION 4: FIRST AID MEASURES

4.1 FIRST AID PROCEDURES

The following first aid recommendations are based on an assumption that appropriate personal and industrial hygiene practices are followed.

Eye Contact: No need for first aid is anticipated.

Skin Contact: No need for first aid is anticipated.

Inhalation: No need for first aid is anticipated.

If Swallowed: No need for first aid is anticipated.

SECTION 5: FIRE FIGHTING MEASURES

5.1 FLAMMABLE PROPERTIES

OSHA Flammability Classification: Not Applicable

5.2 EXTINGUISHING MEDIA

Material will not burn. Use fire extinguishers with class B extinguishing agents (e.g., dry chemical, carbon dioxide).

5.3 PROTECTION OF FIRE FIGHTERS

Special Fire Fighting Procedures: Wear full protective equipment (Bunker Gear) and a self-

contained breathing apparatus (SCBA).

Unusual Fire and Explosion Hazards: No unusual fire or explosion hazards are anticipated.

SECTION 6: ACCIDENTAL RELEASE MEASURES

Accidental Release Measures: Not applicable.

SECTION 7: HANDLING AND STORAGE

7.1 HANDLING

This product is considered to be an article which does not release or otherwise result in exposure to a hazardous chemical under normal use conditions.

SAFETY DATA SHEET

Skudo All-Terrain Mat

Page: 3 of 5

Compilation Date: 6/15/18

Revision No: 0

7.2 STORAGE

Store under normal warehouse conditions.

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 ENGINEERING CONTROLS

Not applicable.

8.2 PERSONAL PROTECTIVE EQUIPMENT (PPE)

8.2.1 Eye/Face Protection

Not applicable.

8.2.2 Skin Protection

Gloves are not required.

8.2.3 Respiratory Protection

Under normal use conditions, airborne exposures are not expected to be significant enough to require respiratory protection.

8.2.4 Prevention of Swallowing

Not applicable.

8.3 EXPOSURE GUIDELINES

None Established

SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES

Specific Physical Form: Non-Woven Material

Odor, Color, Grade: Orange unbacked, vinyl z-web

General Physical Form: Solid

Specific Gravity Not Applicable

SECTION 10: STABILITY AND REACTIVITY

Stability: Stable.

Materials and Conditions to Avoid: None known

Hazardous Polymerization: Hazardous polymerization will not occur.

Hazardous Decomposition: Under recommended usage conditions, hazardous

decomposition products are not expected. Hazardous decomposition products may occur as a result of oxidation,

heating, or reaction with another material.

Skudo All-Terrain Mat

Compilation Date: 6/15/18

Revision No: 0

SECTION 11: TOXICOLOGICAL INFORMATION

Please contact the address listed on the first page of the SDS for Toxicological Information on this material and/or its components.

SECTION 12: ECOLOGICAL INFORMATION

ECOTOXICOLOGICAL INFORMATION

Not applicable.

CHEMICAL FATE INFORMATION

Not applicable.

SECTION 13: DISPOSAL CONSIDERATIONS

Waste Disposal Method: Dispose of waste product in a permitted hazardous waste

facility.

EPA Hazardous Waste Number (RCRA): D005 (Barium), D007 (Chromium), D008 (Lead)

Since regulations vary, consult applicable regulations or authorities before disposal.

SECTION 14: TRANSPORT INFORMATION

Please contact the emergency numbers listed on the first page of the SDS for Transportation Information for this material.

SECTION 15: REGULATORY INFORMATION

US FEDERAL REGULATIONS

Contact Skudo for more information.

311/312 Hazard Categories:

Fire Hazard - No Pressure Hazard - No Reactivity Hazard - No Immediate Hazard - No

Delayed Hazard - No

Section 313 Toxic Chemicals subject to the reporting requirements of that section and 40 CFR part 372 (EPCRA):

INTERNATIONAL REGULATIONS

Contact Skudo for more information.

This SDS has been prepared to meet the U.S. OSHA Hazard Communication Standard, 29 CFR 1910.1200.

SECTION 16: OTHER INFORMATION

NFPA Hazard Classification

Health: 0 Flammability: 0 Reactivity: 0 Special Hazards: None

National Fire Protection Association (NFPA) hazard ratings are designed for use by emergency response personnel to address the hazards that are presented by short-term, acute exposure to a material under conditions of fire, spill, or similar emergencies. Hazard ratings are primarily based on the inherent physical and toxic properties of the material but also include the toxic properties of combustion or decomposition products that are known to be generated in significant quantities.

HMIS Hazard Classification

Health: 0 Flammability: 0 Reactivity: 0 Protection: A

Hazardous Material Identification System (HMIS®) hazard ratings are designed to inform employees of chemical hazards in the workplace. These ratings are based on the inherent properties of the material under expected conditions of normal use and are not intended for use in emergency situations. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered mark of the National Paint and Coatings Association (NPCA).

SECTION 4: First aid measures

4.1. Description of first aid measures

| | May cause irritation to mucous membranes. Move the exposed person to fresh air. Seek medical attention if irritation or symptoms persist. |
|---------------------------|---|
| Inhalation | Contact lenses should be removed. Rinse immediately with plenty of water for 15 minutes holding the eyelids open. Seek medical attention. |
| Eye contact | Wash off immediately with plenty of soap and water. Remove contaminated clothing. Seek medical attention if irritation or symptoms persist. May cause irritation to skin. |
| Skin contact Ingestion | DO NOT INDUCE VOMITING. Seek medical attention. |

| SECTION 5: Firefighting m | SECTION 5: Firefighting measures | |
|----------------------------------|---|--|

The information supplied in this Safety Data Sheet is designed only as guidance for the safe use, storage and handling of the product. This information is correct to the best of our knowledge and belief at the date of publication however no guarantee is made to its accuracy. This information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any other process.

Safety Data Sheet

Product: SkudoBoard

Issue Date: June 18, 2018

1. IDENTIFICATION

1.1 Product Name: SkudoBoard

1.2 Chemical Classification Flame Retardant PP Board

1.3 Product Operation Suggestions Construction

and Restrictions:

1.4 Company Introduction

Manufacturer/Supplier Name: Skudo LLC

Address: 11120 Zodiac Ln

Dallas, TX 75229

USA

Tel: +1 (972) 993-0777

Fax: +1 (972) 993-0700

E-mail <u>info@skudousa.com</u>

Emergency Tel: +1 (972) 993-0777

1.5 First Issue Date June 18, 2018

2. HAZARDS IDENTIFICATION

2.1 Color: Black or Grey. Board or Panel. Physical State: Odor: Inodorous or slight odor. 2.2 Hazard Classification: No harm. 2.3 Signs and Precautionary Statements **Graphic Symbol:** None. Signal Word: None. 2.4 Cardinal Symptom after Contact Eye Protection: Use safety glasses. Safety glasses should be consistent with Directive 89/686/EEC Category 2. If there is a potential for exposure to board which could cause eye discomfort, wear chemical goggles. Chemical goggles should be consistent with EN 166 or equivalent. If exposure causes eye discomfort, use a full-face respirator. Skin Protection: No precautions other than clean body-covering clothing should be needed. Hand Protection: Chemical protective gloves should not be needed when handling this material. Consistent with general hygienic practice for any material, skin contact should be minimized. Use gloves with insulation for thermal protection, when needed. **Respiratory Protection:** Use an approved air-purifying respirator when vapors are generated at increased temperatures or when dust or mist is present. Use the following CE approved air-purifying respirator: When dust/mist are present use a Particulate filter, type P2. When combinations of vapors, acids, or dusts/mists are present use an organic vapor cartridge with a

Low toxicity. It may cause choking if swallowed.

particulate pre-filter, type AP2.

2.5 Emergency Measures: Avoid contact with eyes.

2.6 Other Hazards: Unknown

Ingestion:

3. COMPOSITION INFORMATION ON INGREDIENTS

3.1 Chemical Classification: Compound Mixture

3.2 Risk Composition: Flame Retardant PP Board

<u>Chemical Name</u> <u>CAS#</u> <u>% (w/w)</u>

Polypropylene 9003-07-0 55%-80%

Flame Retardant 1%-10%

Filler and assistant 1%-25%

4. FIRST AID MEASURES

4.1 First Aid Measures

Eye Contact: Flush eye thoroughly with water for several minutes.

Remove contact lenses after the initial 1-2 minutes and continue flushing for several additional minutes. If effects occur, consult a doctor, preferably an

ophthalmologist.

Skin Contact: If molten material meets skin, do not apply ice but

cool under ice water or running stream of water. Do not attempt to remove the material from the skin. Removal may result in severe tissue damage. Seek

medical attention immediately.

Inhalation: Move person to fresh air; if effects occur, consult a

doctor.

Ingestion: If swallowed, seek medical treatment. May cause

gastrointestinal blockage. Do not induce vomiting unless

directed to do so by medical personnel.

4.2 Notes to Doctor: If burn is present, treat as any thermal burn, after

decontamination. No specific antidote. Treatment of

exposure should be directed at the control of symptoms and the clinical condition of the patient.

5. FIRE-FIGHTING MEASURES

5.1 Suitable Extinguishing Media: Water fog or fine spray. Dry powder fire extinguishers,

carbon dioxide fire extinguishers, foam.

5.2 Prohibited Fire Extinguishing Agent: Unknown.

5.3 Special Drainage: None.

5.4 Special Fire Extinguishing Procedure: Evacuate personnel from fire. Isolate of fire and

prohibit unwanted people into fire zone. Soak the burning material thoroughly with water to cool and

prevent reignition. If the material is molten, do not apply direct water stream. Use fine water spray or foam. Cool surroundings with water to cool fire zone. Extinguish small fire with hand-held dry power fire extinguisher or carbon dioxide extinguisher.

Ingestion: If swallowed, seek medical treatment. May cause

gastrointestinal blockage. Do not induce vomiting unless

directed to do so by medical personnel.

5.5 Special Protective Equipment for

Firefighters:

Wear positive-pressure self-contained breathing apparatus (SCBA) and protective clothing (includes fire helmet, coat, trousers, boots and gloves). If protective equipment is not available or not used, fight fire from a protected location or safe distance.

6. ACCIDENTAL RELEASE MEASURES

6.1 Personal Precautions: Spilled material may cause a slipping hazard. Use

appropriate safety equipment.

6.2 Environmental Precautions: Prevent from entering soil, ditches, sewers,

waterways and / or groundwater.

6.3 Elimination Method: Contain spilled material if possible. Sweep up. Collect

in suitable and properly labeled container.

7. HANDLING AND STORAGE

7.1 Handling Precautions: Workers should be protected from the possibility of

contact with molten resin. Do not get molten material in eyes, on skin or clothing. Pneumatic conveying and other mechanical handling operations can generate combustible dust. To reduce the potential for dust explosions, electrically bond and ground equipment and do not permit dust to accumulate. Dust can be ignited

by static.

7.2 Storage Precautions: Store in accordance with good manufacturing practices.

7.3 Unsuitable Packing Materials: Unknown.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

8.1 Industrial Hygiene Standards

Exposure Limit: Unknown

8.2 Engineering Controls Good general ventilation should be sufficient for most

conditions.

Ventilation Local exhaust ventilation may be necessary for some

operations.

8.3 Personal Protection

Respiratory Protection: Use an approved air-purifying respirator when vapors

are generated at increased temperatures or when dust/mist is present. The following should be effective types of air-purifying respirators: When

dust/mist are present use a filter. When

combinations of vapors, acids, or dusts/mists are present use an organic vapor cartridge with a

particulate pre-filter.

Eye Protection: Use safety glasses. If there is a potential for exposure

to particles which could cause eye discomfort, wear chemical goggles. If exposure causes eye discomfort,

use a full-face respirator.

Hand Protection: Use gloves to protect from chemical injury. Selection

of gloves will depend on the task. Use gloves with

insulation for thermal.

Skin and Body Protection: No precautions other than clean body-covering

clothing should be needed.

9. PHYSICAL AND CHEMICAL PROPERTIES

9.1 Physical State: Board or Panel

9.2 Color: Black or Grey

9.3 Odor: Inordorous or slight odor

9.4 pH Not applicable

9.5 Melting Point: 329-329°F (165-200°C).

9.6 Boiling Point: Not applicable

9.7 Flash Point: Not tested

9.8 Blast Limit in Air

Upper Not tested.

Lower: Not tested.

9.9 Vapor Density (25°C): Not applicable.

9.10 Vapor Pressure air=1): Not applicable.

9.11 Density: 0.9-1.1g/cm³

9.12 Solubility: Negligible.

9.13 Distribution Coefficient (N-oc- Not tested.

tanol/Water):

9.14 Autoignition Temperature: Not tested.

9.15 Decompose Temperature: Not tested.

9.16 Odor Threshold: Not tested.

9.17 Evaporation Rate: Not applicable.

9.18 Flammability (Solid, Gas): Not applicable.

10. STABILITY AND REACTIVITY

10.1 Stability: Stable.

10.2 Conditions to Avoid: Products can decompose at elevated temperature.

10.3 Incompatible Materials: Unknown.

10.4 Hazardous Polymerization: Will not occur.

10.5 Hazardous Decomposition: Decomposition products depend upon temperature,

air supply and the presence of other materials. Processing may cause the releases of irritant smoke and other decomposition. When temperature exceeds the melting point, this product may release polymer fragments. Decomposition products could include and are not limited to: aldehydes, alcohols,

organic acids and some other marginal

hydrocarbons.

11. TOXICOLOGICAL INFORMATION

11.1 Exposure Ways: Inhalation, skin contact and accidental ingestion.

11.2 Effects of Over Contact: No notable harms under normal handling.

11.3 Acute Toxicity:

Eye Contact: Direct contact may cause eye irritation experienced as

mild discomfort and redness.

Skin Absorption: Estimated LD50, rabbit > 2000 mg/kg. No serious

effects for transitory contact.

Ingestion: Estimated LD50, rat > 5000 mg/kg. Very low

ingestion hazards under normal handling.

Inhalation: Estimated LC50, rat > 50 mg/1(4h, dusts/mist). No

serious effects for transitory contact.

11.4 Chronic Toxicity

Skin: Repeated or long-time contact may cause skin

irritation and dermatitis.

Ingestion: Repeated or massive ingestion may cause physical

harm.

Inhalation: Not applicable.

11.5 Repeated Dose Toxicity: Additives are encapsulated in the product and are

not expected to be released under normal processing

conditions or foreseeable emergency.

11.6 Chronic Toxicity and Carcinogenicity: Not applicable.

11.7 Growth Toxicity: Not applicable.

11.8 Procreation Toxicity: Not applicable.

11.9 Inheritance Toxicity: Not applicable.

12. ECOLOGICAL INFORMATION

12.1 Ecotoxicity: Not expected to be acutely toxic, but may cause

adverse effects by physical/mechanical means.

12.2 Resistance and Degradability: This water-insoluble polymeric solid is expected to be

insert in the environment.

12.3 Migration in Soil: It will remain in the soil in the terrestrial environment.

And it will sink into the aquatic environment.

13. DISPOSAL CONSIDERATIONS

13.1 Product Waste Disposal Ways: Disposal according to local regulatory.

13.2 Packing Waste Disposal Ways: Disposal according to local regulatory.

14. TRANSPORT INFORMATION

14.1 Road and Rail Transport: Not regulated.

14.2 Sea Transportation (IMDG): Not regulated by IMDG codes.

14.3 Air Transportation (IATA): Not regulated by IATA.

14.4 Specific Operational Requirements: None.

15. REGULATORY INFORMATION

15.1 Applicable Regulations: Regulations for the Safe Use of Chemicals in Workplace

[(1996) 423#, sent by Department of Labor]

Public Summons for General Rules of Chemicals

Classification and Hazard [GB 13690-2009]

15.2 Chemical Storage

TSCA: All components of this product are on the TSCA

Inventory or are exempt from TSCA Inventory

requirements.

AICS: All substances contained in this product are listed or

are exempt from requirements.

DSL: All substances contained in this product are listed on

DSL Inventory or are exempt from DSL Inventory

requirements.

IECSC: All substances contained in this product are listed or

are exempt from requirements.

EINECS: All substances contained in this product are listed or

are exempt from requirements.

KECL: All substances contained in this product are listed or

are exempt from requirements.

PICCS: All substances contained in this product are listed or

are exempt from requirements.

HSNO: All substances contained in this product are listed or

are exempt from requirements.

ENCS/ISHL: All substances contained in this product are listed or

are exempt from requirements.

16. OTHER INFORMATION

The product safety instructions in this safety data sheet are according to our existing knowledge and experience. This sheet does not describe the product components and specifications. Any public and/or for specific purpose product characteristics should not be removed from this data sheet. All users have responsibility and obligation to ensure the intellectual property rights of products and to abide the relevant laws and regulations.

| ILSIING J | |

TEST: ASTM E648

Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source

SCOPE/PURPOSE OF TEST

To measure the ability of a flooring material categorized as "interior floor finish" to limit the progression of a fire through a corridor. The test attempts to simulate a situation where the flooring material in the corridor would be subjected to igniting flames and radiant heat emanating from a fire in a room adjacent to the corridor. The test was designed to achieve a more realistic rating for flooring materials which had been previously tested by the ASTM E84 Tunnel Test, which tests all materials in the ceiling of the test chamber.

BRIEF DESCRIPTION OF TEST

A test specimen, 9" x 41", is placed on the floor of the test chamber. A gas-fired radiant heater is situated above the test specimen. The exposed specimen face, 8" x 40", experiences a heat flux of about 1.1 watts/cm² at the point closest to the radiant heater. The heat experienced by the specimen declines until it reaches a low of about 0.1 W/cm² at the far end of the specimen.

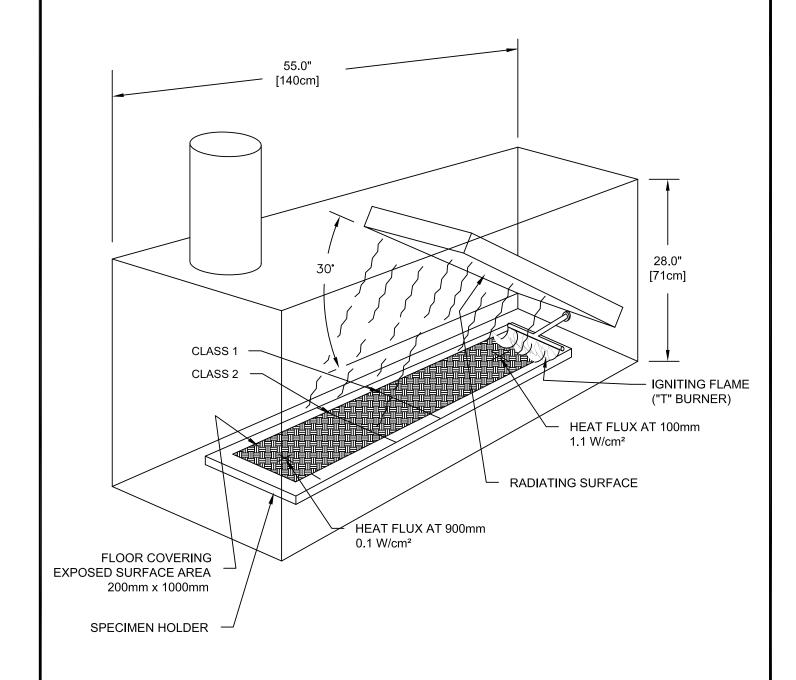

A multi-flamelet burner sits 2" above the near end of the test specimen. After a 5 minute period, the multi-flamelet burner is placed in contact with the near end of the test specimen. If flaming is indicated on the specimen, the test is continued to the point where the flaming or surface burning extinguishes. This point of extinguishment is referred to as the "critical radiant flux at flameout". The less distance the specimen burns, the higher the "critical radiant flux" value. The higher the value, the better the classification of the tested material.

CLASSIFICATION SYSTEM

Values which are usually cited by model building codes written by NFPA (National Fire Protection Agency) and ICC (International Code Council) for interior floor finish materials:

| Class | Minimum Critical Radiant Flux at Flameout |
|-------|---|
| 1 | 0.45W/cm^2 |
| 2 | 0.22 W/cm ² |

A gas-fired radiant heater is situated above the test specimen. A multi-flamelet burner is positioned above the specimen at the test starting point. After a 5 minute proheat period, the multi-flamelet burner is lowered to impinge on the end of the test specimen. The test continues until all burning of the specimen extinguishes (flameout). The specimen burn distance (flame front progession) is compared against a graph which contains heat flux levels from the 0" point to the 40" point. The heat flux at the distance burned is reported. TEST PERFORMED: ASTM E 548 - Standard Test Method for Critical Radiant Plux of Floor Covering Systems Using a Radiant Heat Energy Source (NFPA Designation No. 251) SPECIMEN PREPARATION: [x] Each specimen was laid flat over a 1/4" Etera board IPC: 48H) (a cement asbestos substitute). No bonding agent was used. | Each specimen was bonded to a 1/4" Etera board [PC: 96H] a cement asbestos substitute) using multi-purpose carpet adhesive. | | Bach specimen, with self adhesive backing, was bonded [PC: 96H] to a 1/4" Etera board (a cement asbestos substitute). | Each specimen was placed over a rubber coated jute and [PC: 48H] animal hair 50 oz/yd1 cushioning material.

SKUDO Anti-Fungal Protect

Skudo Anti-Fungal Protect is a novel CIT, AOX and VOC-free, synergistic biocide specifically developed for the wet-state protection of water based formaldehyde sensitive products.

Chemical and Physical Characteristics

Composition: A water based formulation of 2-methyl-

4-isothiazolin-3-one (MIT) and 1,2-

benzisothiazolin -3-one (BIT) Appearance:

Odour: Yellow liquid

Density (20°C): Mild

MIT Content: 1.030 g/cm3 **BIT Content:** 2.35 - 2.65% pH (20°C): 2.35 - 2.65% Solubility: 7.50 - 9.5

Miscible with water and most lower alcohols and

Stability in application: glycols

Stable in the presence of light, over the pH range 2 - 10 and up to

80°C

Biocidal Properties

Skudo Anti-Fungal Protect has a very broad microbiological activity spectrum showing truly synergistic activity against bacteria, moulds and yeasts that may cause infection and deterioration of water based products, including the following organisms:

Typical Spoilage Organisms

Bacteria Moulds Yeasts

Achromobacter sp. Aspergillus sp. Candida albicans Cephalosporium sp. Aeromonas sp. Rhodotorula sp. Alcaligenes sp. Cladosporium sp. Saccharomyces cerevisiae

Bacillus sp. Fusarium sp.

Escherichia coli Paecilomyces variotii Penicillium funiculosum Flavobacterium

sp. Klebsiella sp. Proteus sp.

Pseudomonas sp. Streptomyces sp.

Applications / Use Levels

Skudo Anti-Fungal Protect is suitable for the wet-state preservation of a wide range of aqueous products including paints, polymer emulsions, adhesives, ceramic glazes, fillers and sealants.

Skudo Anti-Fungal Protect is particularly effective in products having an alkaline pH and for the preparation of ecologically acceptable formulations.

Normal use concentrations are in the range 0.20 - 0.40%, depending on the product to be protected and the environmental conditions to which it will be exposed. The precise level required by a specific formulation can be determined by contacting your local representative.

Texchem UK Ltd. Holmes Mill Holmes Street Rochdale **OL12 6AQ** United Kingdom Tel: +44(0) 1706 711 990 Fax: +44 (0) 1706 710 985 Email: info@texchem.co.uk Website: www.texchem.co.uk

Skudo Anti-Fungal Protect

Addition / Compatibility

ď

Skudo Anti-Fungal Protect can be added at any time during production. However, it is advised to add it as early as possible to give protection throughout the production process. Care should be taken to ensure that temperature, pH and redox potential at the point of addition are suitable for stability of the product.

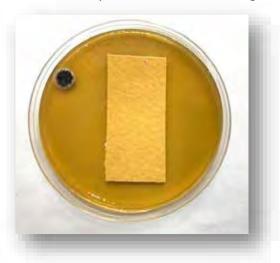

Skudo Anti-Fungal Protect is compatible with most formulations in which its application is recommended and it may be used in formaldehyde sensitive systems. Nevertheless, users are advised to carry out their own tests or seek further advice.

Performance Examples:

Untreated mat

Skudo HT mat with **Skudo Anti-Fungal Protect** incorporated into the coating

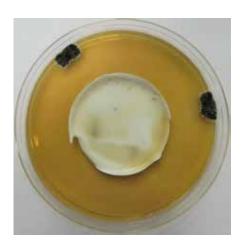

Skudo Basecoat containing Skudo Anti-fungal Protect

Wet Product

Dried Compound

Each of the images shows a clear zone of inhibition when compared to the untreated fabric.

Skudo Anti-Fungal Protect Page 2 of 3

Packaging / Storage / Transport / Regulatory Approvals

Packaging: 25 and 200 kg plastic drums and 1,000 kg intermediate bulk containers

Shelf Life: 12 months from production date when stored at approximately 20°C

Storage: Store in the original containers and protect from extremes of

temperature.

Skudo Anti-Fungal Protect is frost sensitive. At temperatures below 1°C BIT and BIT sodium salt may crystallise. However, after warming to a maximum temperature of 50°C any crystals formed will re-dissolve and the product

can be used with no impairment of activity.

Transportation Skudo Anti-Fungal Protect is classified as non-_®hazardous for transport

RegulatoryApprovals:

The active substances of **Skudo Anti-Fungal Protect** have BfR chapters 14 and 36, FDA 21 CFRs 175.105, 176.170 and 176.180 and a wide range of

other regulatory approvals. The US EPA registration number of the product

itself is 67071-29.

Safety / Labelling / Toxicology

For detailed information on the toxicology and handling of **Skudo Anti-Fungal Protect** and advice on the labelling of products in which it may be used, please refer to the separate Material Safety Data Sheet.

The information contained in this leaflet is intended to be of assistance to users but is without guarantee. Variations can occur in application and users are advised to conduct their own tests. Suggestions for use neither give nor imply any freedom from patent infringement.

Flooring Slip Resistance Test Results — BOT 3000

Client: Skudo USA Inc.

Flouring: HT Skade mat (Orange) mounted on filter board Report date: 9/16/12

Page 1 of 2 Sample no.: 1209-1412 Pieces tested: 1

Date tested: 9/15/12 Sample size: 13 in x 13 inches

Where tested: Sotter Engineering Corp. lab

How and when sample obtained: Supplied by client 9/14/12

Static and dynamic coefficient of friction (COF) by BOT-3000 digital tribonator, using ANSI B101.1 and B101.3 text methods for wet friction. The same text methods, but without wetting, are used for dry friction.

Average static (S) and dynamic (D) coefficient of friction:

| | AS RECEIVED |) |
|------|-------------|------|
| | <u>Dry</u> | Wet |
| SCOF | 1.00 | 1.00 |
| DCOF | 0.64 | 0.56 |

Results apply only to the sample tested. Values of 0.90 or higher may be lower than actual COF because the BOT-3000 cannot measure instantaneous values exceeding 1.00. High values indicate potentially good traction. Slip resistance can be affected by maintenance-related items including wear, flour enatings, buffing, and contamination, as well as footness. Please see the next page for ANSI minimum recommendations regarding average SCOF and DCOF.

The BOT-3000 uses 28 mm (1.1 inch) wide curved laboratory-grade artificial hard robber test feet. Further information on the BOT-3000, and a video demonstration of the instrument, can be found at

http://www.safistydirectamerica.com/BOT-3000.html

ANSI denotes the American National Standards Institute — a private, not-fur-profit organization. Their method B 101.1 is "Test Method for Measuring Wet SCOF of Common Hard-Surfaced Floor Materials." The method quotes the following reference values:

| Wet average SCOF value | Available traction |
|------------------------|---|
| ≥ 0.60 | High traction — lower probability of slipping |
| 0.40 -< 0.60 | Moderate traction — increased probability of slipping |
| <0.40 | Minimal available traction — higher probability of slipping |

ANSI B101.3 is "Test Method for Measuring Wet DCOF of Common Hard-Surface Floor Materials." The method quotes the following reference values:

| Wet average DCOF value | Slip resistance potential |
|---|-----------------------------------|
| 0.43 or higher (level floor) 0.46 or higher (inclines) | Lower probability of slipping |
| 0.30-0.42 (level floor) 0.30-0.45 (inclines) | Incressed probability of slipping |
| Less than 0.30 | Higher probability of slipping |

Softer Engineering Corporation, and most leading slip-and-fall forensic experts, believe that dynamic friction is a more reliable way of assessing wet slip potential than is static friction.

Individual values of wet DCOF for the sample, as required by ANSI B101.3:

| 0 degrees | 57 | 58 | 57 | 57 | 5B |
|-------------|----|-----|----|----|----|
| 90 degrees | 5B | 56 | 56 | 55 | 57 |
| 180 degrees | 56 | -55 | 55 | 55 | SB |
| 270 degrees | 54 | 53 | 54 | 52 | 53 |

Respectfully submitted,

DATA INTERPRETATION

For Wet Static Coefficient of Friction results interpreted per the ranges set forth in the ANSVNFSI B101.1-2009 Test
Method for Measuring Wet Static Coefficient of Friction of Common Hard Surface Floor Materials
For Wet Dynamic Coefficient of Friction results interpreted per the ranges set forth in the: ANSVNFSI B101.3-2012 Test
Method for Measuring Wet Dynamic Coefficient of Friction of Common Hard Surface Floor Materials
Table 1-ANSINFSI B101.1-2009

| Wel SCOF Value (µ) | Available Traction | Remediation |
|--------------------|---|---|
| mµ ≥ 0.60 | High Traction - Lower probability of slipping | Monitor SCOF regularly and maintain cleanliness. |
| 0.40 ≤ mµ < 0.60 | Moderate Traction - Increased probability of slipping | Monitor SCOF regularly and maintain cleanliness. Consider traction enhancing products and technologies. |
| mu < 0.40 | Minimal Available Traction - Higher probability of slipping | Seek professional intervention. Consider replacing flooring and/or coating with high traction products. |

NOTE: It is imported to make that these extrepoins are not industrie of all possible conditions. There are nonerous variables that may sald to, or take from the associable tracking of any given from surface, (in: type or style of furtheses, types and trapperoy contaminants, protestion processpation, etc). These surges were established traced on a fixt of approved tribuncators, which were in term based on a specific set of selection oriesis. As such, these values contained in Table 1, have not been validated against the Eul range of other tribuncators. Data produced by tribuncators which are not designed to measure well SCOF do not reconstrainly contained to the values fished in Table 7.

Table 1- ANSINESI B101 3-2012

| Wel DCOF Value (µ) | Slip Resistance Potential | Action |
|--|--|---|
| >0.45 | High - Lower probability of slipping | Monitor SCOF regularly and maintain cleanliness. |
| (inclines) mµ > 0.42 | - is a pinaraly or appeng | |
| 0.30≤mu < 0.45 (inclines) 0.30 ≤ mµ < 0.42 | Acceptable - Increased probability of slipping | Monitor SCOF regularly and maintain cleanliness. Consider traction enhancing products and technologies. |
| mμ < 0.30 | Low - Higher probability of slipping | Seek professional intervention. Consider replacing flooring and/or coating with high traction products. |

MATE: It is important to note that these extensions are not inclusive of all possible conditions. There are materials writings that may add to, or take from the auditable location of any given from surface, (it: type or style of factorial, types and frequency contaminants, predestion preaccopation, etc.) The DCOF ranges were established based on research done in Europe editing capitals and mathematical techniques and were validated in the laterality and field through extensive testing with the fathering standardized methods. DRI 15207—657 Testes, DRI 51130—Genom Rang, DRI 51137—GLIG 2000 Testes. These values would be applicable to other test methods or devices which can produce an R correlation of greates than 0.00 to one of these three effective standards. Data produced by tribunders which are not designed to measure and DCOF do not recoveredly correlate to the makes field in Table 1. Results of dry and not tests should be view independent of each other, and not compared.

Test completed and testified to by: Brent A. Johnson ANSI/WACH 0001 04/10/2018

Technical Report

DATA INTERPRETATION

For Wet Static Coefficient of Friction results interpreted per the ranges set forth in the ANSI/NFSI B101.1-2009 Test

Method for Measuring Wet Static Coefficient of Friction of Common Hard Surface Floor Materials

For Wet Dynamic Coefficient of Friction results interpreted per the ranges set forth in the: ANSI/NFSI B101.3-2012 Test

Method for Measuring Wet Dynamic Coefficient of Friction of Common Hard Surface Floor Materials

Table 1-ANSI/NFSI B101.1-2009

| Wet SCOF Value (μ) | Available Traction | Remediation |
|--------------------|---|---|
| | High Traction | Monitor SCOF regularly and maintain |
| $m\mu \ge 0.60$ | - Lower probability of slipping | cleanliness. |
| 0.40 ≤ mµ < 0.60 | Moderate Traction - Increased probability of slipping | Monitor SCOF regularly and maintain cleanliness. Consider traction enhancing products and technologies. |
| mµ < 0.40 | Minimal Available Traction - Higher probability of slipping | Seek professional intervention. Consider replacing flooring and/or coating with high traction products. |

NOTE: It is important to note that these categories are not indicative of all possible conditions. There are numerous variables that may add to, or take from the available traction of any given floor surface. (ie: type or style of footwear, types and frequency contaminants, pedestrian preoccupation, etc). These ranges were established based on a list of approved tribometers, which were in turn based on a specific set of selection criteria. As such, these values contained in Table 1. have not been validated against the full range of other tribometers. Data produced by tribometers which are not designed to measure wet SCOF do not necessarily correlate to the values listed in Table 1.

Table 1- ANSI/NFSI B101.3-2012

| Wet DCOF Value (µ) | Slip Resistance Potential | Action |
|--|--|---|
| >0.45 (inclines) mµ > 0.42 | High - Lower probability of slipping | Monitor DCOF regularly and maintain cleanliness. |
| 0.30≤mu < 0.45 (inclines) 0.30 ≤ mµ < 0.42 | Acceptable - Increased probability of slipping | Monitor DCOF regularly and maintain cleanliness. Consider traction enhancing products and technologies. |
| mμ < 0.30 | Low - Higher probability of slipping | Seek professional intervention. Consider replacing flooring and/or coating with high traction products. |

*NOTE: It is important to note that these categories are not indicative of all possible conditions. There are numerous variables that may add to, or take from the available traction of any given floor surface. (ie: type or style of footwear, types and frequency contaminants, pedestrian preoccupation, etc.) The DCOF ranges were established based on research done in Europe utilizing empirical and mathematical techniques and were validated in the laboratory and field through extensive testing with the following standardized methods: DIN 13287 – BST Tester; DIN 51130 – German Ramp; DIN 51131 – GMG 2000 Tester. These values would be applicable to other test methods or devices which can produce an R correlation of greater than 0.80 to one of these three reference standards. Data produced by tribometers which are not designed to measure wet DCOF do not necessarily correlate to the values listed in Table 1. Results of dry and wet tests should be view independent of each other, and not compared.

TESTS AND RESULTS

Test Conducted:

16 CFR 1630-Standard for the surface flammability of carpets and rugs (FF 1-70).

Conditioning:

1. Laundering condition: No, as per client's requirement.

2. Oven conditioning: T: 105°C Duration: 2 hours, then cool for 1hour in desiccator.

Requirement:

 A specimen passes the test if the charred portion does not extend to within 2.54 cm. (1.0 in.) of the edge of the hole in the flattening frame at any point;

2. At least seven of the eight specimens shall meet the test criterion in order to conform with this Standard.

Test Details:

| Specimen No. | The charred portion extend to within 2.54 cm. (1.0 in.) of the edge of the hole in the flattening frame at any point. (Yes or No) | Rating |
|--------------|---|--------|
| 1 | No | Pass |
| 2 | No | Pass |
| 3 | No | Pass |
| 4 | No | Pass |
| 5 | No | Pass |
| 6 | No | Pass |
| 7 | No | Pass |
| 8 | No | Pass |

Conclusion:

As per test method of the 16CFR 1630 contained, the submitted specimens comply with the requirement.

| Distance (cm) | Specimen1 | Specimen 2 | Specimen 3 | |
|----------------------|-----------------------|-----------------------|----------------------|--|
| Distance (cm) | Time (minute: second) | Time (minute: second) | Time (minute: second | |
| 90 | | | - | |
| 95 | - | | | |
| 100 | , | , | | |
| Extinguishing time | 52:14 | 50:47 | 54:14 | |
| Burned distance (cm) | 38 | 40 | 41 | |
| Observations | Melting | Melting | Melting | |

Calculation:

| | Specimen1 | Specimen 2 | Specimen 3 | Average | S | ٧ |
|---|-----------|------------|------------|---------|------|-----|
| Oritical radiant flux (W/cm ²) | 0.56 | 0.52 | 0.50 | 0.53 | 0.03 | 5.7 |

Note: S-estimated standard deviation: V-coefficient of variation

The classifications are as follows:

| | Class I | Class II |
|----------------------------------|---------|----------|
| Critical Radiant Flux, watts/cm² | ≥ 0.45 | ≥ 0.22 |

Since the tested sample received a Critical Radiant Flux -0.53watts/cm², it would meet the requirement of Class I Interior Floor Finish.

STATEMENTS:

The test results relate to the behaviour of the test specimens of a product under the particular conditions of the test; they are not intended to be the sole criterion for assessing the potential tire hazard of the product in use.

The test results relate only to the specimens of the product in the form in which were tested. Small differences in the composition or thickness of the product may significantly affect the performance during the test and may therefore invalidate the test results. Care should be taken to ensure that any product, which is supplied or used, is fully represented by the specimens, which were tested.
