

Skudo®

For all your **temporary** surface protection needs, Skudo's got you covered

- Reliable surface protection from machinery, impact, spills, stains, UV and more
- Safer work site – Non-slip and seamless work surface that stays in place
- Temporarily bonds to protected surface, so dirt, debris and grime never touch the surface you're protecting
- Can be laid in the early project phases (14 or more days after a concrete pour, when pH is less than 11.0)
- Three grades available suitable for Heavy, Medium or Light Traffic areas
- Fast and easy application with Base Coat and Top Mat
- Peel up removal, leaving surface clean and in the condition you intended

Protect it right the first time

Skudo® is a revolutionary, temporary surface protection system that will safeguard concrete, marble, hardwood and more from construction site damages and spills for up to a year.

Reduce project costs when Skudo's on the job

"By far, Skudo® is the most durable floor protection system on the market."

- Doug Carlton,
Concrete Décor, May/June 2013

The most durable **temporary** protection available

Skudo® is the ideal solution for all commercial projects requiring surface protection from start to finish.

This revolutionary Patent-Pending design forms an extremely tough outer skin, providing reliable temporary protection against:

- Machinery driven on the surface
- Impact from long term foot traffic and dropped materials
- Scaffolding and shoring
- Water
- Mold
- UV Exposure
- Spills – including mortar, coffee, cola
- Stains – including rust, chalk lines and stucco
- Mild solvents
- Hydraulic fluid and oils
- Sparks and fire (HT only)

Complete protection against construction site damages

Withstands dropped mortar

Keeps debris and dirt from touching the surface you're protecting

Skudo® improves job site safety

- Non-slip working surface in both wet and dry conditions
- Seamless work surface – no trip hazards
- Stationary – stays in place despite worker activity and weather
- High visibility colors

Choose the level of protection needed for your construction environment

HT

Heavy Traffic

- For construction environments involving heavy machinery and extensive construction activity
- Superior water and spill resistance
- Protection for 9 months exterior, 12 months interior

MT

Medium Traffic

- Sites with lighter construction traffic and machinery, such as man lifts
- Moderate resistance to water and spills
- Limited duration of use exterior, 9 months interior protection

LT

Light Traffic

- Situations with mainly foot traffic
- Light protection against spills
- Ideal for vertical services such as cabinetry
- Interior use only, up to 6 months

Speak to your Skudo Representative to determine the right product for your construction environment and weather conditions.

Skudo® will protect the time, labor and materials involved in **every** surface you lay
