

# Protecting Stairs on school project

## Project Details:

- Multi-Structure School Project
- Honolulu, HI
- Nordic PCL Construction, Inc.
- Skudo MT Mat
- 3,000 s.f. of area was covered
- Concrete

## Why Skudo Was Chosen:

- The stairs in this facility were a deliverable item, and past practices and methods had proven ineffective in keeping the stairs clean while being safe for use.
- Skudo stood up to the construction traffic and debris, while providing a safer working surface.

**“Skudo worked great. It held onto the stairs no problem and peeled back from the cast in stair nosing without leaving any residue. A bit on the expensive side but compared to cleaning everything again not too bad. I’ll be using it again on my other projects.”**
