

# Protecting concrete on rail platforms

## Project Details:

- B.A.R.T Commuter Rail Stations, San Francisco, CA
- Swinerton / Flatiron Construction Corp
- Skudo Commercial System, HT Mat - 10,000 s.f.
- Concrete (pre-polished)
- January 2013 to July 2014

## Project Scope:

As part of the 3.2 mile \$484 Million extension of the Bay Area Rapid Transport system (BART) to the Oakland International Airport, Skudo was chosen to protect the concrete for the new platforms over the construction period. Concrete that was to be later polished was protected from rust and general construction stains and damage over the nearly 2 year construction process.
