

Temporary Surface Protection for Marine Surfaces

Skudo MARINE TACK-MAT is a user friendly and versatile solution for marine surface protection. The application process is simple: Peel off the release paper from the Mat and stick it to the surface to be protected. Tack-Mat can be removed and re-applied as needed, leaving no residue even on the most sensitive surfaces.

Description

Skudo Marine Tack-Mat is an all in one temporary protection system that can be applied to any surface you wish to protect. Tack-Mat is completely water proof - no spill or stain will penetrate including damaging chemicals, solvents, oils and other fluids.

Marine Tack-Mat is extremely strong and suitable for contractor traffic and even machinery. When applied to decking, Tack-Mat creates a higher level of safety for workers with a non-slip, stationary walking surface - no need to remove shoes anymore.

Application

Marine Tack-Mat is available in 560 sq. ft. rolls of either Light or Heavy Traffic grades.

Install by simply peeling off the release paper and pressing down over the surface, either horizontal or vertical. Tack-Mat can be used in any weather, even extreme cold.

NOTE: All adhesives have the potential to lift finished coatings or paint depending on the condition and age of the surface. Testing a small piece in a non-critical area will help you judge suitability for use.

MARINE TACK-MAT protects all walls & floors including:

- ✓ Fiberglass & FRP
- ✓ Teak Decking
- ✓ Other Hardwoods - sealed & unsealed
