

Deck Defend

Temporary Surface Protection for Marine Surfaces

Description

Deck Defend is a weather resistant peelable coating designed to provide protection for boats during construction, refurbishment, transport or storage.

A liquid applied water-based coating, Deck Defend dries to form a skin-tight film that protects against staining, paint overspray, scratching dirt, weathering, mold and UV for up to 12 months.

Benefits

- Reduces clean up and maintenance costs
- Resists build related spills and splatter, including debris and paint
- Can be applied at manufacturer to provide protection during transit
- Protects surface from mold during winter storage
- Simple application with airless sprayer or roller
- Environmentally friendly
- Easy peel off removal

Uses

Deck Defend can be applied to:

- All Fiberglass and FRP decks
 - Ideal for external storage of Molds
- Metals, such as Stainless Steel and Aluminum
- Glass
- All Heat and Chemically Cured Paints

Deck Defend is **not** suitable to be applied on acrylic surfaces. The Marine Tack-Mat is a suitable replacement on these surfaces.

Application & Removal

Skudo Deck Defend is quick and easy to apply by roller or airless sprayer. Two coats should be applied for best results. Drying time will take 2-4 hours, but can vary according to the relative humidity and ambient temperature. Maximum peeling strength will be achieved in 5 days.

When required, Deck Defend is removed by hand peeling or pressure washing, revealing a clean, undamaged surface with no residue.

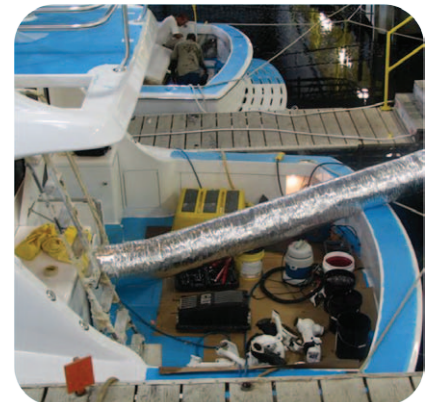

The peeled coating can then be simply condensed into a small ball and disposed.
