

Protecting terrazzo during hospital build

Project Details:

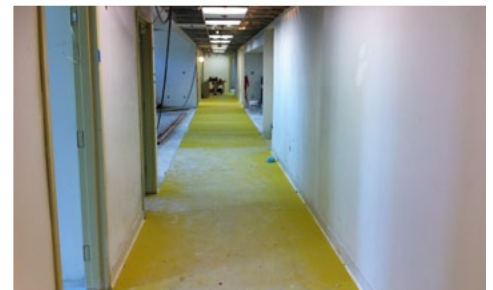

- Guam Naval Hospital
- Webcor Builders for the US Department of the Navy
- Skudo Commercial System, MT Mat - 100,000 s.f.
- Terrazzo
- June-December 2013

Completed Naval Hospital in Guam

Project Scope:

As part of Watts Webcor Obayashi joint venture, Webcor Builders completed a \$158 Million Guam Naval Hospital Replacement Project for The NAVFAC Pacific in 2014. The project met the LEED Silver certification standard. The new 300,000 s.f. hospital has 42 beds, 4 operating rooms, 2 C-section rooms, and MRI and CT scanning suites. It's opening coincided with the relocation of 8,000 Marines and their family members from Okinawa, Japan.

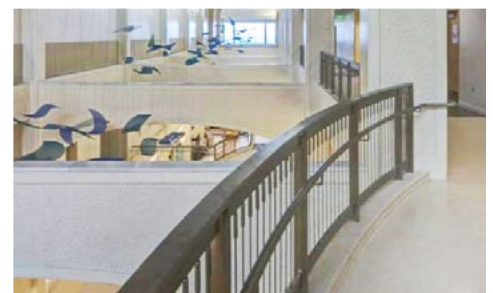

Hallway terrazzo protected from foot traffic and dust

Skudo's Commercial System, MT (Medium Traffic) grade, was laid on a third of the hospital's Terrazzo floor, protecting it not only from damages, dirt and debris, but also mold and bacteria.

Third floor main traffic areas protected during construction

Finished third floor after Skudo removal
