

FAQ'S

Skudo CURE

Q. What is Skudo CURE?

A. **Skudo CURE** is a penetrating curing agent that chemically hardens and dust-proofs concrete for improved abrasion resistance without forming a coating on the surface.

Q. Why is Skudo CURE different to most traditional cure systems?

A. **Skudo CURE** has the following advantages

- **Not topical**
Skudo CURE penetrates the surface forming a moisture retaining barrier within the capillaries within the concrete which inhibits moisture loss improving hydration and long-term slab strength.
- **Superior coverage rate**
Skudo CURE coverage is up to 1500 square feet **per gallon**.
Traditional Cure and Seal products max out at around 400 square feet per gallon.
- **Skudo CURE** was designed for use on decorative concrete; it requires no UV light for dissipation and will not stop the penetration of densifiers or dyes into the surface.
- **Approved Curing System**
Skudo CURE has been tested and approved for use by The Department of Defense, At Home Stores,7 Eleven and Amazon Distribution Centers.
- **No mechanical or chemical removal required**
As **Skudo CURE** is not topical film forming it therefore requires no mechanical or chemical treatments to the slab prior to initial grinding or placement of adhesive installed materials such as tile, timber, VCT or carpet.

Q. How is Skudo CURE applied?

A. **Skudo CURE** is applied with a standard pump sprayer with new / clean nozzle tip. Best practice is to use a microfiber mop to spread the Skudo CURE evenly across the surface. Alternatively overlapping the spray by 50% will ensure an even coverage. Over burnishing the slab will impede the absorption of the Skudo CURE into the concrete.

Q. Where can I buy Skudo CURE?

A. Visit our website at www.skudousa.com select the "where to buy tab" then click on your location on the map.

**Alternatively call Skudo Customer Service at (972) 993-0777 (toll free: 1-888-758-3611), Monday-Friday, 7:30 a.m.-4:00 p.m. Central Time.*
