

Skudo®

Innovative Surface Protection Solutions

Skudo offers products that provide solutions to common work site problems that damage finished surfaces and increase the possibility of trip and fall hazards during fast-paced ongoing construction. These issues cost you time and money.

- **Protection of Surfaces:** All Skudo products form a barrier over the installed surfaces, protecting them from construction site-related damages and spills, reducing or eliminating costly repairs to the finished surfaces during the punch list process.
- **Protection of Workers:** Skudo products provide slip-resistant, stationary and seamless surfaces, creating a safer environment for all who step foot onto your site.

Skudo Protects from:

- **Damage:** Stains, Spills, Paint, Splatter, Chemicals, Dirt, Mud, Debris
- **Impact:** Machinery, Equipment, Scaffolding, Framing, Forklifts, Scissor Lifts, Foot Traffic
- **Slip/Trip Hazards:** Protection stays in place, reducing safety hazards
- **Extra Cost:** Protecting right from the beginning saves clean up and repairs at the end of the project.

Innovative, purpose-build surface protection systems. This is all we do.
